

NEXTGEN EMDAT TRANSCRIPTION DEMONSTRATION

This demonstration reviews usage of the Emdat transcription service in NextGen. Details of the workflow will likely vary somewhat, depending on practice policy & clinic layout, though this should give you a good idea of the functionality.

This has been prepared with EHR 5.8 & KBM 8.3. Subsequent updates may display cosmetic & functional changes.

Use the keyboard or mouse to pause, review, & resume as necessary.

Introduction

- Emdat (by Nuance) is a transcription option we have incorporated into NextGen.
- It will be available for departments to license for any providers for who they feel it will improve workflow & efficiency. If you don't have it & are interested, please discuss with your clinic manager and/or the EHR Team.

Introduction

- Emdat is not meant to *replace* the usage of NextGen as you've been taught.
- Emdat should *complement* your current usage of NextGen by allowing you to more easily "tell the story" in sections like the HPI or Plan, while continuing to do structured data entry in areas where that is important, such as the Med List, Allergies, Problem List, & Past Medical History.

Introduction

- Users are *strongly encouraged* to continue to make robust use of **Quick Saves** (for areas like **ROS & Physical Exam**) & **My Phrases** (available in many areas, but especially the **Plan** section). You'll probably find that most of the time these meet your needs, & you can reserve dictation for those times that are exceptional or out of the ordinary.
- This will save you the time of dictating (& your department the cost of the transcription).

Introduction

- Keep in mind the more you dictate & forgo structured data entry, the more likely that the NextGen coding assistant will not be helpful, so you'll need to manually select billing codes based upon your evaluation of your documentation.
- You will also be able to use Emdat to dictate up to 3 letters per encounter.

Basic Workflow

- The general workflow will begin with the nurse rooming the patient & entering data into NextGen.
- The provider will perform the encounter, entering as much data as possible into NextGen. This will include *at least* any modifications of the PMSF history, Problem List, Med List, Allergies, & Assessments. Physical exam entry in this manner is encouraged, using saved presets.

Basic Workflow

- The provider will dictate remaining content into a smartphone or iPad app. Most often this will be HPI & Plan details, ± a few physical exam findings.
- The provider uploads this dictation from the device.

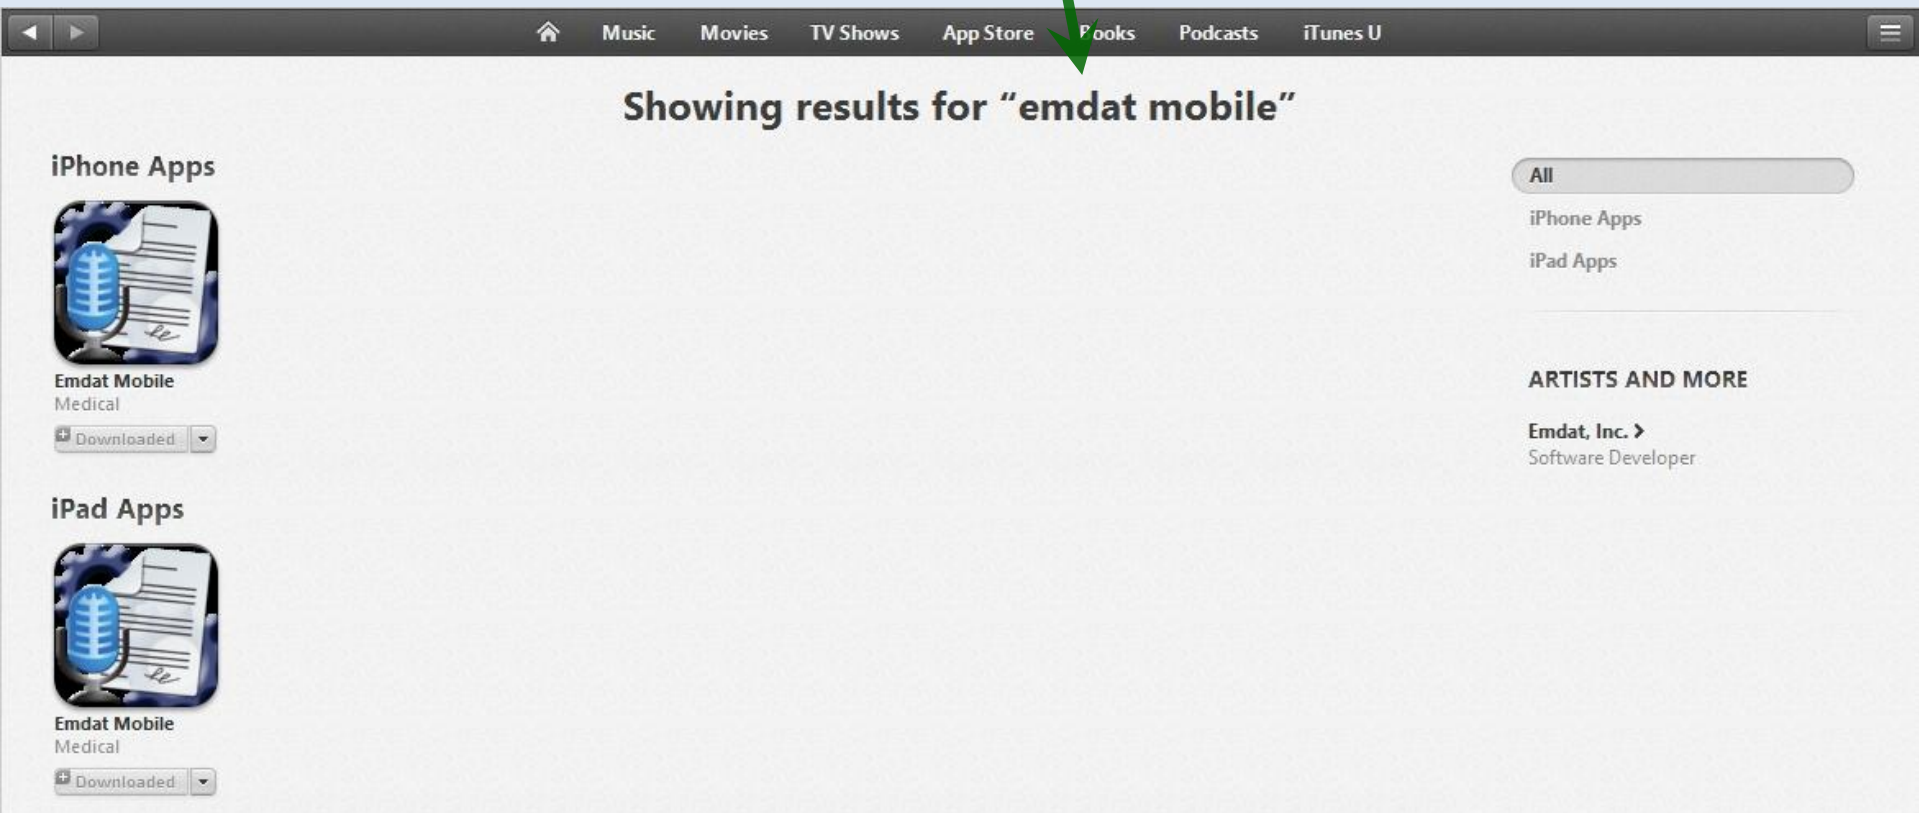

Basic Workflow

- The next day the provider will receive a task notification that the dictation is back; the provider goes to the encounter & generates the visit note.
- The things you've dictated will appear in the appropriate sections of the visit note, alongside the information entered directly into NextGen.
- Review the note, make any changes desired, then E-sign it.

How does it work?

- Full manuals for the Emdat smartphone apps are available at:
https://kb.emdat.com/wiki/Manuals_and_Documentation
(However, keep in mind there are features described in the manual that we do not use, or use in a different manner.)
- But what follows should get you up to speed.

To get started, go to the app store for your iPhone, iPad, or Android device & search for the free **Emdat Mobile** app. Download & install.

The screenshot shows the iTunes App Store interface. At the top, a navigation bar includes icons for Home, Music, Movies, TV Shows, App Store, Books, Podcasts, and iTunes U. Below the navigation bar, the text "Showing results for 'emdat mobile'" is centered. On the left side, there are two sections: "iPhone Apps" and "iPad Apps". Each section displays the app icon for "Emdat Mobile Medical" and a "Downloaded" button. On the right side, there is a filter menu with "All" selected, and "iPhone Apps" and "iPad Apps" options. Below the filter menu, there is a section titled "ARTISTS AND MORE" which lists "Emdat, Inc." as the software developer.

Now let's look at the basic workflow. Tap **Patients**.

- 8:45 [REDACTED] - DUFFY, ROBERT
- 3:30 Aatestduffy, Daedae 9000062996 - DUFFY, ROBERT ✓
- 4:15 Aatestduffy, adultfemale001 400552 - DUFFY, ROBERT ✓
- 4:30 Aatestduffy, Alice 9000076392 - DUFFY, ROBERT

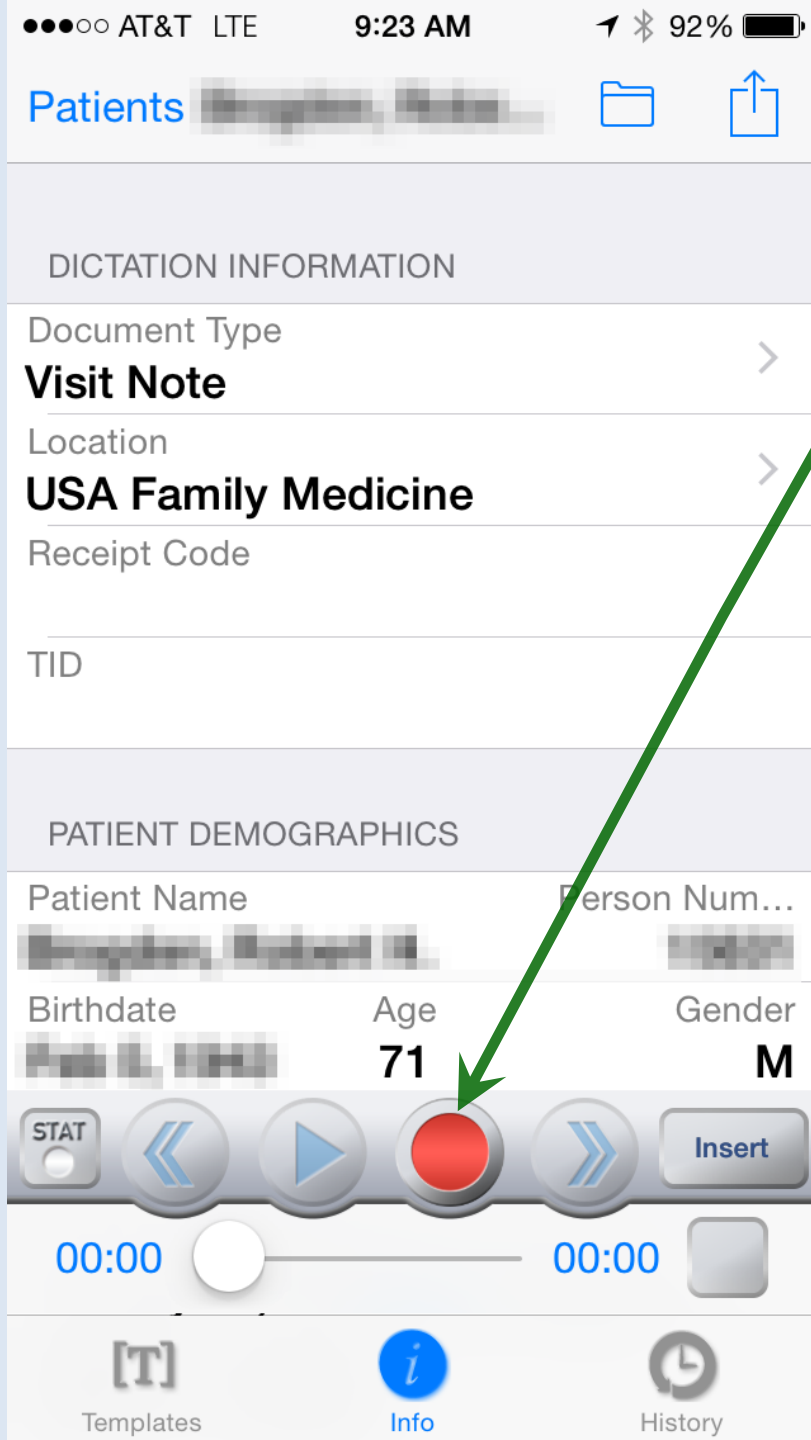

Select the date via the calendar icon.

With Patients selected at the bottom, you'll see your appointment list for the day.

- 8:45 [REDACTED] - DUFFY, ROBERT
- 3:30 Aatestduffy, Daedae
9000062996 - DUFFY, ROBERT ✓
- 4:15 Aatestduffy, adultfemale001
400552 - DUFFY, ROBERT ✓
- 4:30 Aatestduffy, Alice
9000076392 - DUFFY, ROBERT

Tap one of the patients.

This takes you to the recording screen, with transport controls that will be familiar to anyone who has used other dictation systems. Simply tap the red **Record Button** & start dictating.

As an extra confirmation, begin your dictation by saying at least the patient's name & document type. Any other demographics you wish to add, such as medical record number or date of birth, could also prove helpful in the event of a technical problem.

00:00 [Slider] 00:00 [Square button]

After you've dictated something, you can use the **slider** to move back & forth throughout the dictation if you need to review what you've said, change something, or insert something new.

Notice the **Record Mode button**. Tap this.

You can choose among 3 options:

Overwrite will replace everything after the point at which you start dictating.

Insert will insert what you say at that point in the dictation, preserving everything after it.

Append jumps to the end & adds anything new you say to the end of the existing dictation. This can be particularly helpful right after using **Insert**.

⌵ Transcription

If the transcription has been completed & returned, you'll see it here.

HISTORY OF PRESENT ILLNESS:

Janna Aatest is a 49-year-old white female who presents with a complaint of abdominal pain. She states this began about 3 weeks ago. Initially, it was dull and burning, starting after meals. Later, it became more sharp after meals and was still persistent somewhat between meals. It is slightly relieved by antacids. She denies a history of hiatal hernia or peptic ulcer disease in the past. In retrospect, however, she recalls that she has at times used Prilosec over-the-counter, and had not really thought anything about that or mentioned it to a doctor.

Most of the time you won't review dictations this way—but it's nice to know that, even if there is some glitch in getting it back to NextGen, you can still see & hear your dictation from your smartphone.

When you return to your schedule, you'll see the new dictation listed.

This will be transcribed & matched up with the demographic information you've provided.

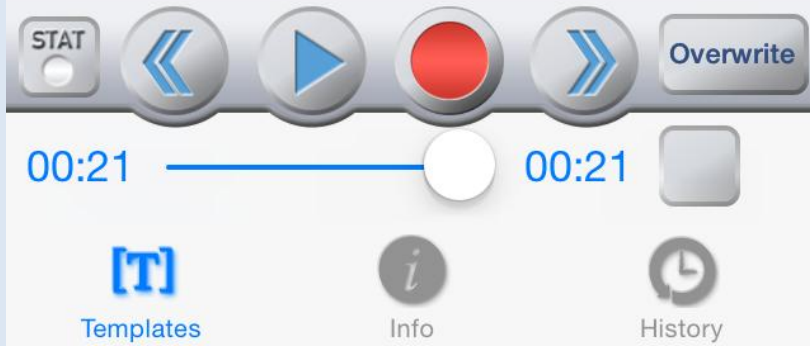

Some tips on dictation:

- Obviously, the less background noise the better, but absolute silence is not necessary. Listen to a little of your dictation to make sure background noise isn't a problem.
- If you stumble over your words, or want to say something differently or more clearly, you can re-do the dictation. But remember you'll also have the opportunity to edit the text when you generate your note.

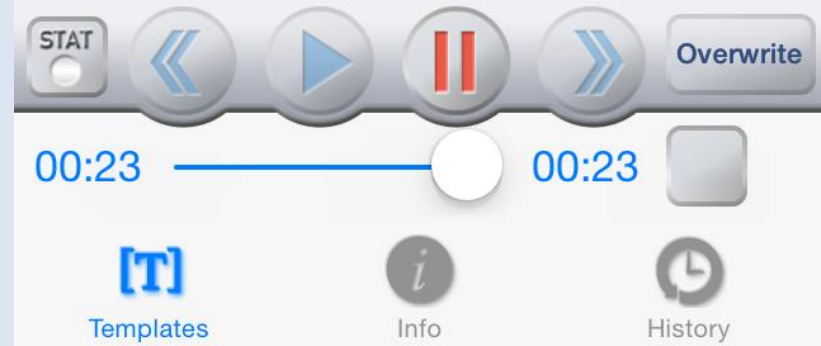

- Hold the phone so you can see it when dictating, instead of up to your head like a telephone. This way you can see the difference between whether you are in **record** or **pause mode**. It's easy for your finger to inadvertently tap something, & it's pretty frustrating to waste time dictating & then discover it was on **pause**. This can also happen if you've enabled silence detection—especially if you set it to the very short 10 second option.

Paused

Recording

- Remember to hedge your bets for getting your dictation back quickly & accurately. The more information you say in the dictation (patient name, DOB, medical record number, encounter date, your name, etc), the more info there is to match the dictation, patient, & encounter if there is a glitch. You don't necessarily *have* to do all this, but you know the saying about belt & suspenders....
- Spell things that you think the transcriptionist might have trouble with. They're good with medical terminology, but names are always challenging, especially if spoken too quickly.

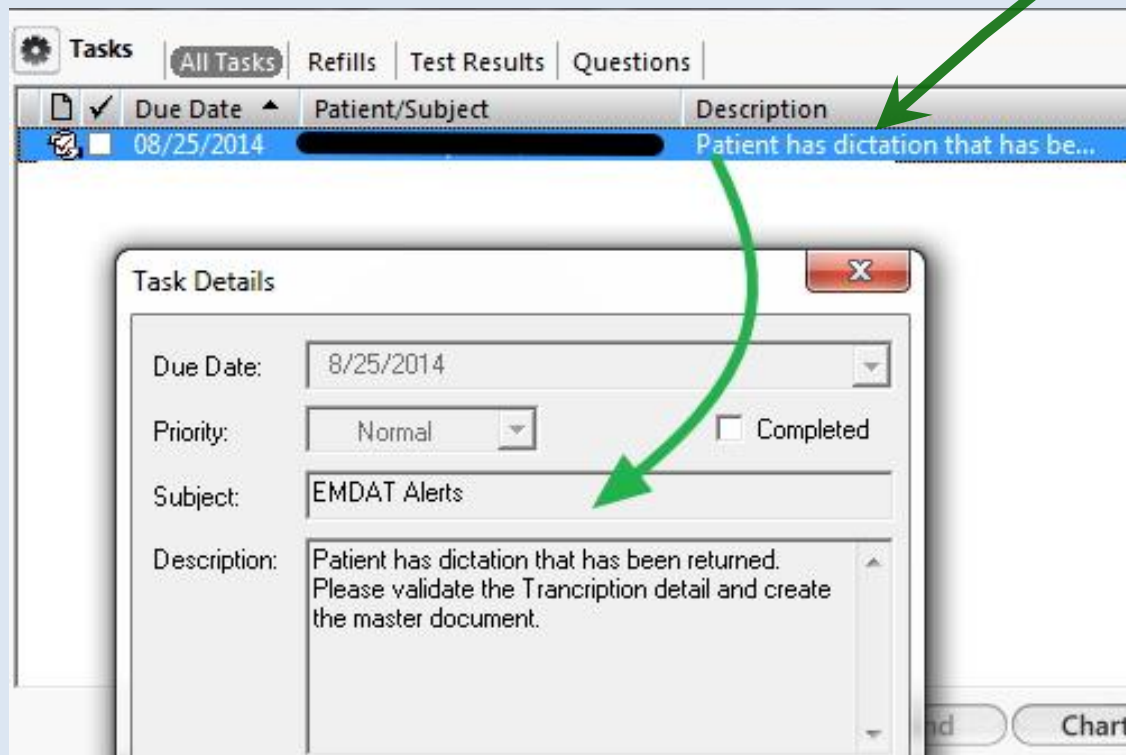

- You don't have to "navigate" to sections of your dictation on the smartphone. Just say things like "HPI," "Review of Systems," "Plan," etc. Your words will go to the appropriate place in the visit note.
- *To the extent that is possible.* Many people jump around & mix content while dictating, & that's actually accommodated pretty well. You just may see elements of HPI, ROS, past history, social history, etc., all lumped together in the HPI if you lump them together as you speak. And that's not the end of the world—the information at least gets into the note in the narrative fashion you intended.

If you haven't already done it, after finishing your dictation, remember to complete other elements of the encounter in NextGen. In particular, add Today's Assessments, as well as update & send prescriptions. Update the Problem & Allergy Lists. While you can dictate your ROS & Physical Exam, it is almost always faster to use Presets (Quick Saves) in NextGen for this, perhaps dictating anything that is particularly atypical & wordy.

Bill for your encounter, either today or after dictation is back. Remember that the more elements you dictate without documenting in NextGen, the more likely the coding assistant in NextGen will either undercode, or not work at all, so you'll have to manually select your billing code.

By the next business day* you'll get a task telling you the dictation has returned. Respond to the task & go to the chart.

* Friday dictations appear on Monday. Dictations you do over the weekend may not appear until Tuesday. Dictations on patients who have not been on your schedule recently may take an additional day to return.
