This demonstration reviews how to use the Generic Procedure Template. In this example we’ll document insertion & removal of Nexplanon, & show how to save that as a preset for future use.

This has been prepared for EHR 5.8 & KBM 8.3. You may see minor cosmetic differences from some of the graphics used here, & subsequent updates may display cosmetic & functional changes.

Use the keyboard or mouse to pause, review, & resume as necessary.
Notes

• There is not a dedicated template in NextGen to deal with Nexplanon insertion or removal, so we need to use the Generic Procedure template.

• While you can search for the necessary diagnosis & procedure codes, it will helpful to know these codes ahead of time, perhaps by keeping them on a “cheatsheet” in the office:
  – Insertion: Diagnosis code V25.5, Procedure code 11981, Device J7307.
  – Removal: Diagnosis code V25.43, Procedure code 11982.
  – Removal with Reinsertion: Diagnosis code V45.52, Procedure code 11983, Device J7307.
The full Procedures Template can be opened by displaying the Navigation Bar & clicking Procedures.

But you can get directly to the Generic Procedure Template by clicking the Procedures Icon at the bottom of the SOAP Tab & selecting Generic from the picklist.
As with most procedure templates, you can use the checkboxes to indicate appropriate preoperative discussions took place.

You can also click Consent to generate a full consent form, though in many cases it will be simpler for clinics to use the paper consent forms they already have, scanning them into NextGen after completion.
This is what the generic consent template looks like. It is a useful tool if you don’t already have a consent form tailored to the procedure you’re performing.
The **Indication Description & Code** boxes are where you document the diagnosis for the procedure. As mentioned earlier, it's easiest if you know the code going in. Click in the **Indication Description** box, bringing up the **Search** popup.

When the popup appears, type **V25.5**, then click **Search**.
A number of phrasings for this code appear. Double-click on whichever you prefer.
Similarly, click in the Procedure Code box, then type 11981.

Double-click on this line when it displays.
Use the checkboxes and popups in the **Anesthesia** section to indicate the local anesthetic you used.

<table>
<thead>
<tr>
<th>Procedure Description</th>
<th>Code</th>
</tr>
</thead>
<tbody>
<tr>
<td>Insert non-biodegradable drug del implant</td>
<td>11981</td>
</tr>
</tbody>
</table>

Skin of L upper arm inspected, cleaned w/ Hibiclens, & anesthetized. Nextplanon placed SQ w/ introducer w/o difficulty.

<table>
<thead>
<tr>
<th>Anesthesia</th>
<th>Dose %</th>
<th>Units</th>
<th>Digital</th>
<th>Local</th>
<th>Nerve</th>
<th>IV</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lidocaine with epinephrine</td>
<td>mg</td>
<td>2%</td>
<td></td>
<td></td>
<td></td>

</tr>
<tr>
<td></td>
<td>mg</td>
<td>3ml</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Procgenanesth**

- Benzocaine
- Demerol
- Diazepam
- Ethyl Chloride
- Lidocaine
- Lidocaine jelly
- Lidocaine topical
- Lidocaine with epinephrine
- Marcaine
- Valium
- Versed
- Xylocaine
Use the appropriate text boxes to add any other notes as needed.

Specify follow-up plans if desired.

When done click **Submit to Superbill**, then **Save & Close**.
Since you expect to use this procedure repeatedly in the future, you can save it as a preset. Before closing the template, click the **Save** icon.
Give your preset a name, then click **Save & Close**.
Back at the bottom of the **SOAP Tab**, click **Visit Document**; the regular visit note (**Master Document**) will include the procedure note.

*(If you want a standalone procedure note, you can do that from the full Procedures Template.)*
Another thing to remember about the Generic Procedure Template: Unlike the dedicated procedure templates, which often submit the charge for both the procedure & medication/device, the Generic Procedure Template only posts the procedure charge to the superbill.

To post the charge for the Nexplanon device, click **Office Diagnostics** at the bottom of the **SOAP Tab**.
In the **Detail** box, type **Done**, then click **Submit to Superbill**, followed by **Place Order & Close**.

Set **Display order set** to **Office Meds**, then scroll down & select **Nexplanon**.
To document the removal of Nexplanon, the method is similar, except you would select diagnosis code **V25.43** & procedure code **11982**.

To document the removal & reinsertion of Nexplanon, you would use diagnosis code **V45.52** & procedure code **11983**.
To use these presets in the future, click the **Open Preset Icon** & make a selection.
This concludes the NextGen Generic Procedure Template—Nexplanon Insertion/Removal demonstration.

Don’t suffer from insanity—enjoy every minute of it.
