NEXTGEN
OFFICE TESTS & MEDS DEMONSTRATION

This demonstration reviews how to order, result, & bill office tests, especially those often done by the nurses via standing orders. It also illustrates how to order, complete, & bill for office meds, such as therapeutic injections. Details of the workflow will likely vary somewhat depending on practice policy & clinic layout, but this should give you a good idea of NextGen functionality.

This has been prepared for EHR 5.8 & KBM 8.3, though a few screen shots from earlier versions may be used when they don't affect the clarity of the presentation. Subsequent updates may display cosmetic & functional changes.

Use the keyboard or mouse to pause, review, & resume as necessary.

Labs (2)					

Many clinics have rules or **Standing Orders** for office tests to be done by the nursing staff in certain circumstances.

In this first example, the patient is having dysuria, & the clinic has standing orders for the nurse to go ahead & perform a dipstick urinalysis. Scroll down on the **Intake Tab** until you reach the **Orders** section, then click on Standing Orders.
