# NEXTGEN PRENATAL INTAKE VISIT DEMONSTRATION

This demonstration reviews a typical intake prenatal visit. Details of the workflow will likely vary somewhat, depending on practice policy & clinic layout, though this should give you a good idea of the prenatal functionality within NextGen.

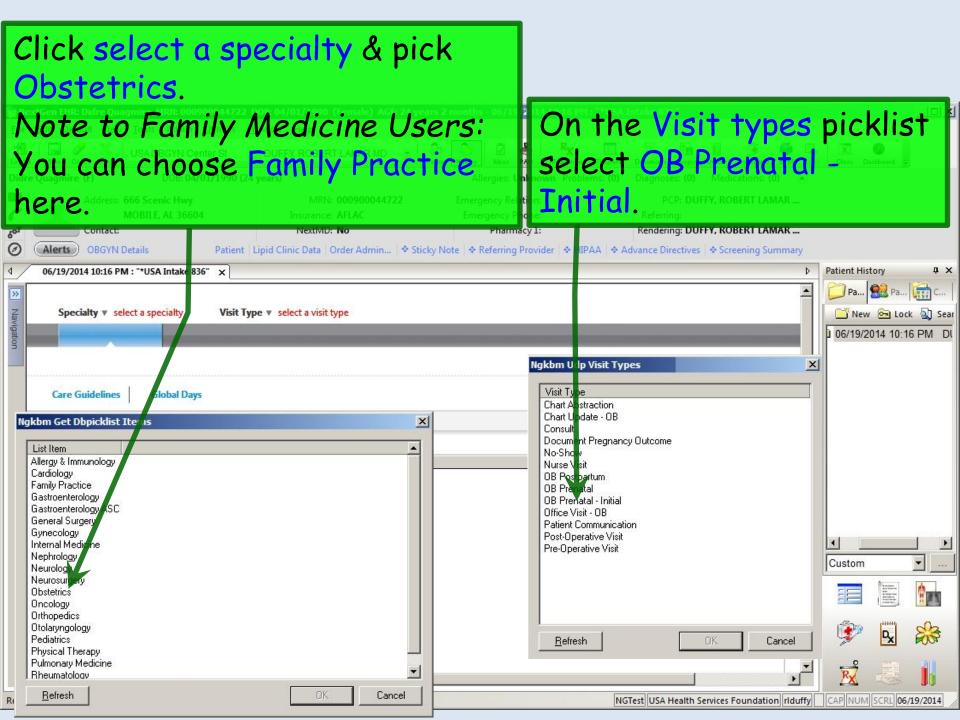

This has been prepared for EHR 5.8 & KBM 8.3, though some screen shots of older versions may appear if they don't compromise the presentation. Subsequent updates may display cosmetic and functional changes.

Use the keyboard or mouse to pause & resume as necessary.

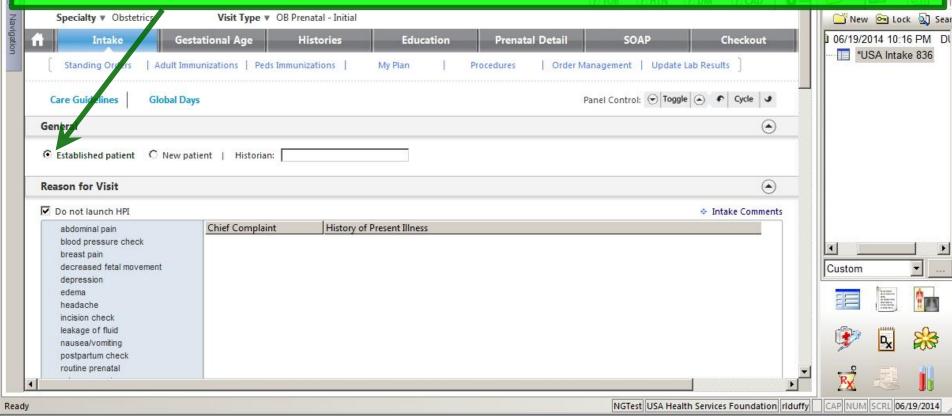

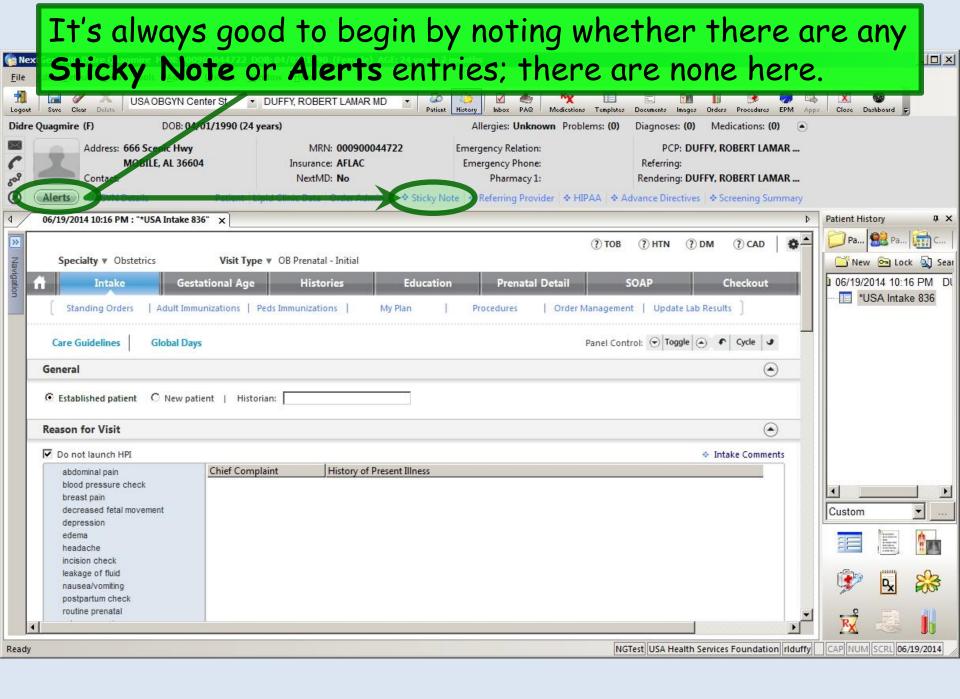

Our patient is in for an intake prenatal exam. She's an established patient, but this is the 1st time she's been seen using NextGen, so we'll be entering some known medical history as we go. For a patient with data already entered into NextGen this would be much more streamlined. And you actually have several options on the order you do things & what parts are done by the nursing staff vs. providers, but this will provide you one example of a reasonable workflow.

Always begin by performing the 4-Point check. Patient Date Provider Location \_ U X NextGen EHR: Didre Quagmire MRN: 0009′ J044722 DOB: 04/01/1990 (Femaly) AGE: 24 years 2 months - 06/19/2014 1( <6 PM : "\*USA Intake 836 Default View Tools Admir Utilities Window Help USA OBGYN Center St DUFFY, ROBERT LAMAR MD DOB: 04/01/1990 (24 years) Allergies: Unknown Problems: (0) Didre Quagmire (F) agnoses: (0) Medications: (0) Address: 666 Scenic Hwy MRN: 000900044722 **Emergency Relation:** P: DUFFY, ROBERT LAMAR ... Other: Add

Note whether the patient is listed as New or Established, since this sometimes needs to be changed. A patient seen elsewhere in the USA system might initially appear as Established, but if it's the first time she's been to your office, that would need to be changed to New. Our patient is Established.

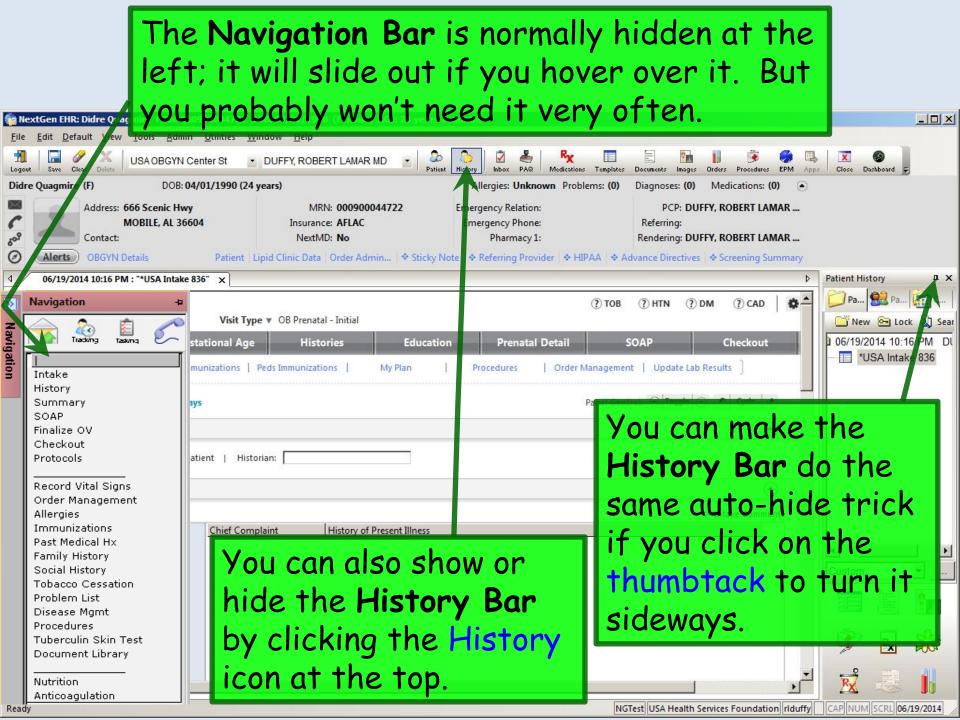

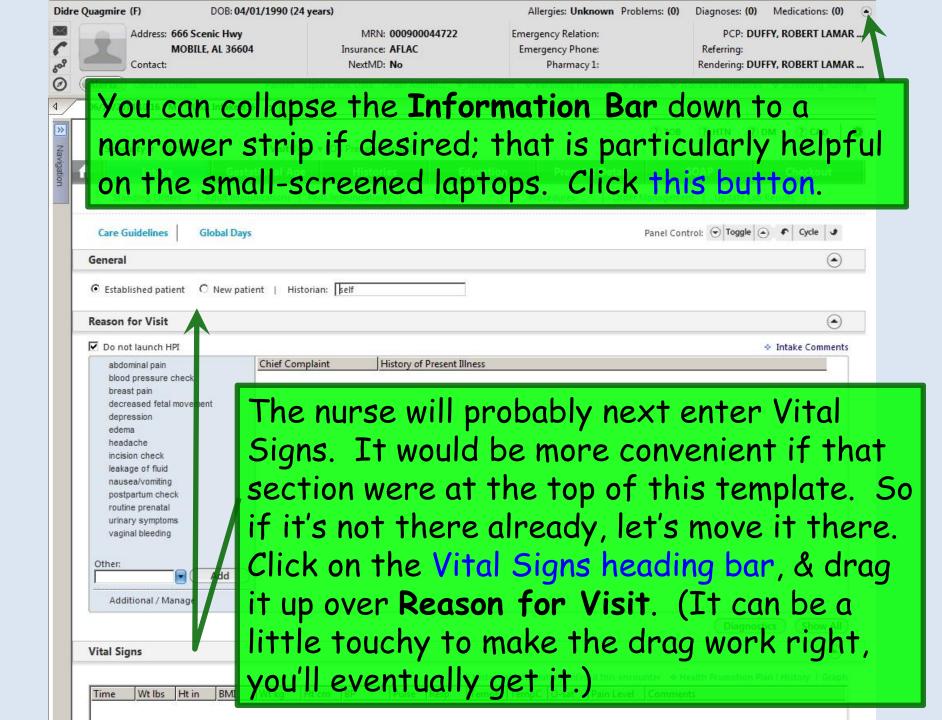

You can select a Historian from the picklist that appears if you click in that box; you can also type in an entry. This is most pertinent if the patient \_ | D | X | is a child or adult unable to speak for herself. Enter data in the white boxes & they'll be summarized in the gray boxes above. She's had one term vaginal delivery & one miscarriage, & is currently pregnant.

Begin by entering Pregnancy # 1. (Unless there was a multiple gestation, it is unnecessary to enter Baby #.)
Using the combination of available entry methods, enter the following data:

Male, born March 2008, at 40 weeks gestation, 6 lbs 8 oz, via NSVD, at USAC&W. She had Preeclampsia, requiring magnesium, & had an epidural.

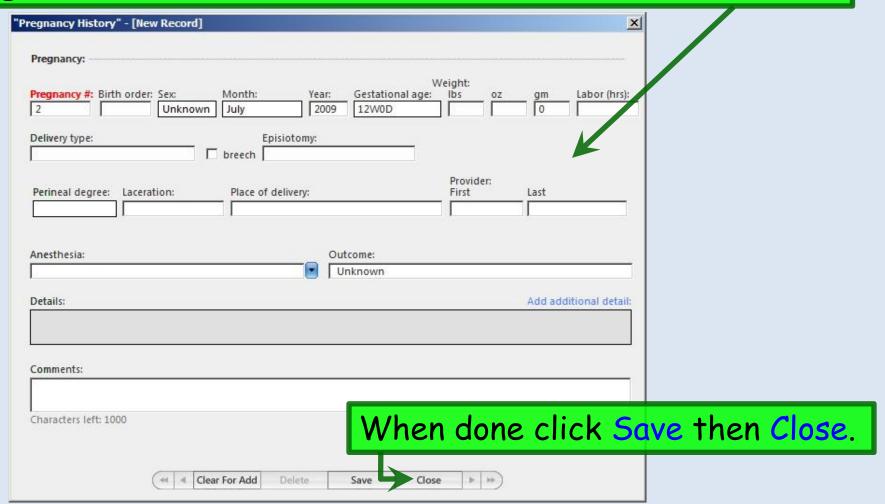

Enter as much information as is known/pertinent.

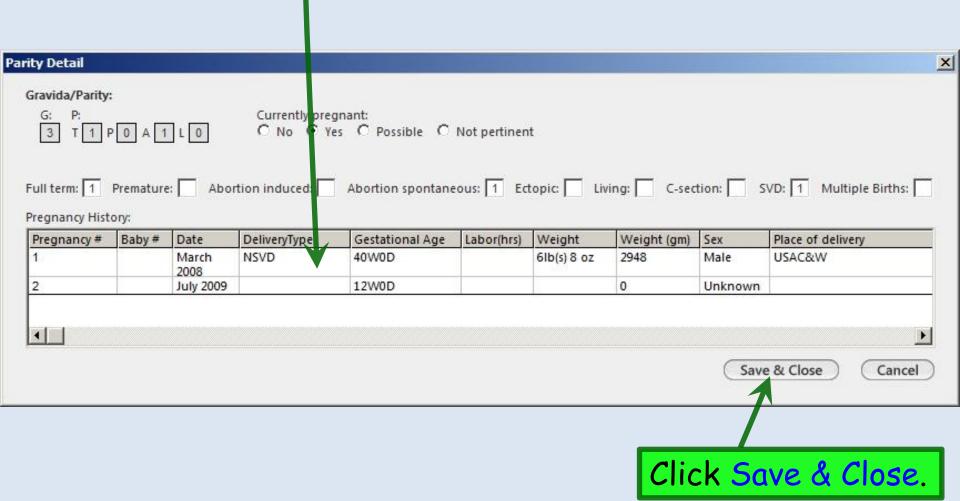

## Enter Pregnancy # 2.

#### Data used here:

Gender-unknown miscarriage July 2009, at 12 weeks gestation.

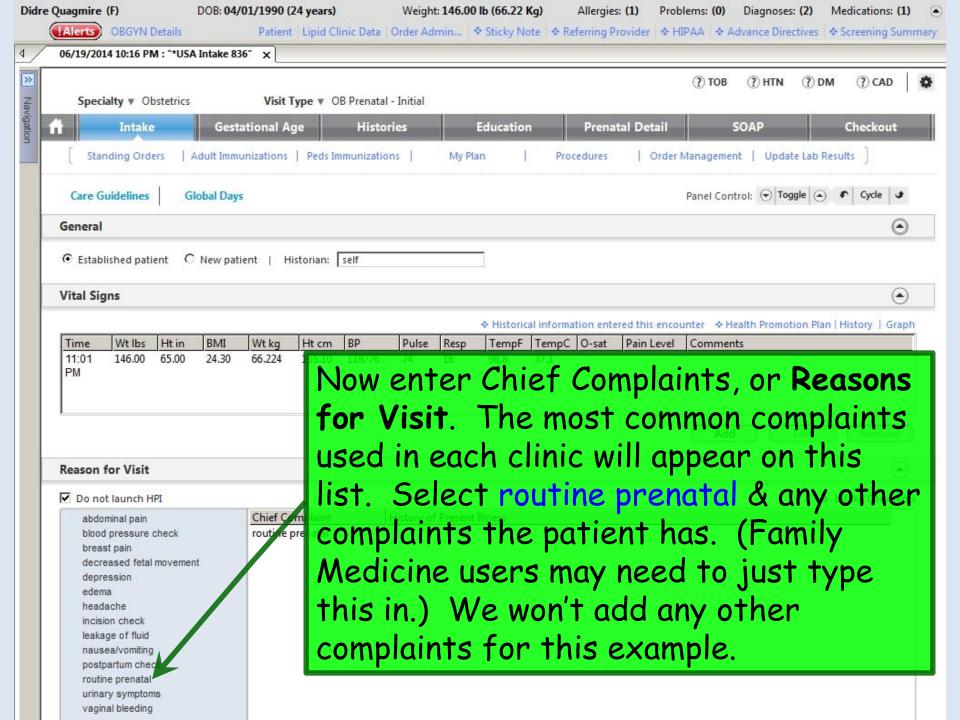

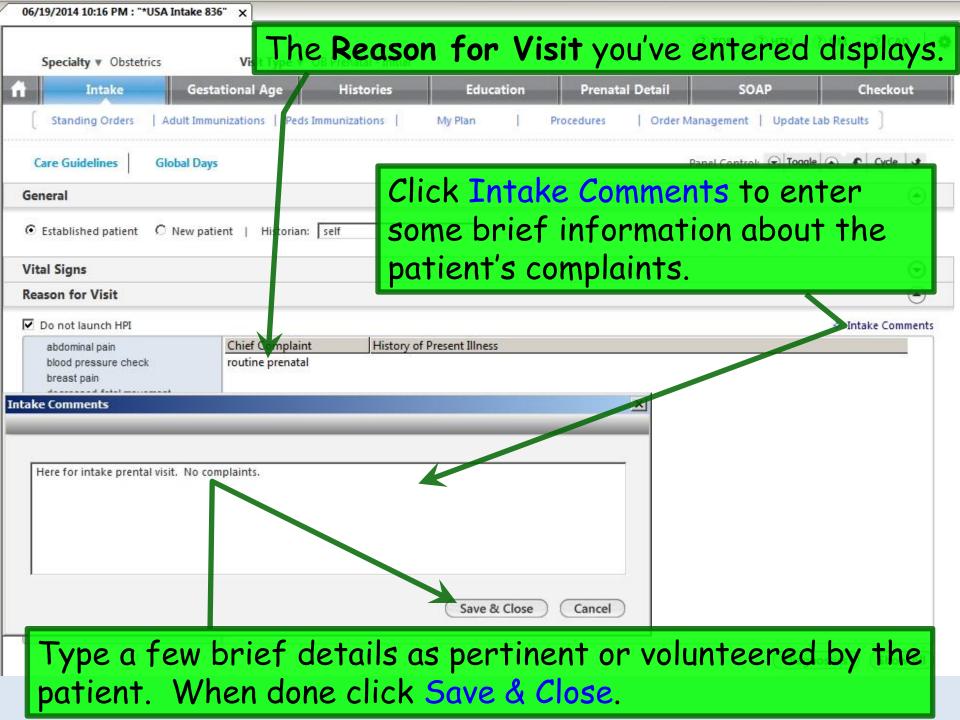

### The details entered display.

On the **Standing Orders** popup, click in the Display category box. In the ensuing popup, double-click Office Tests.

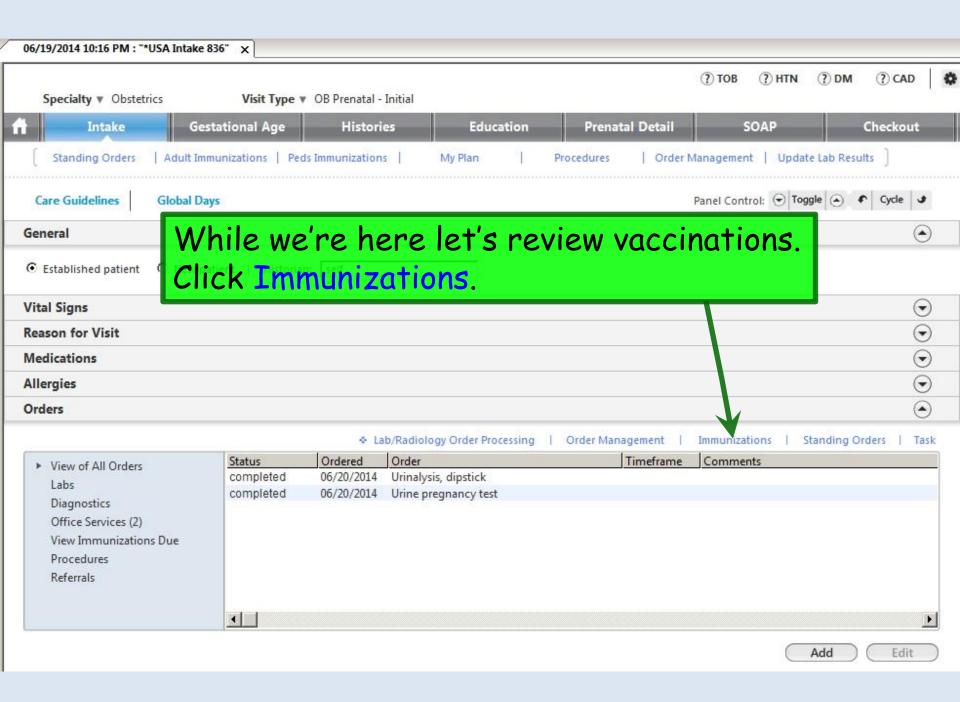

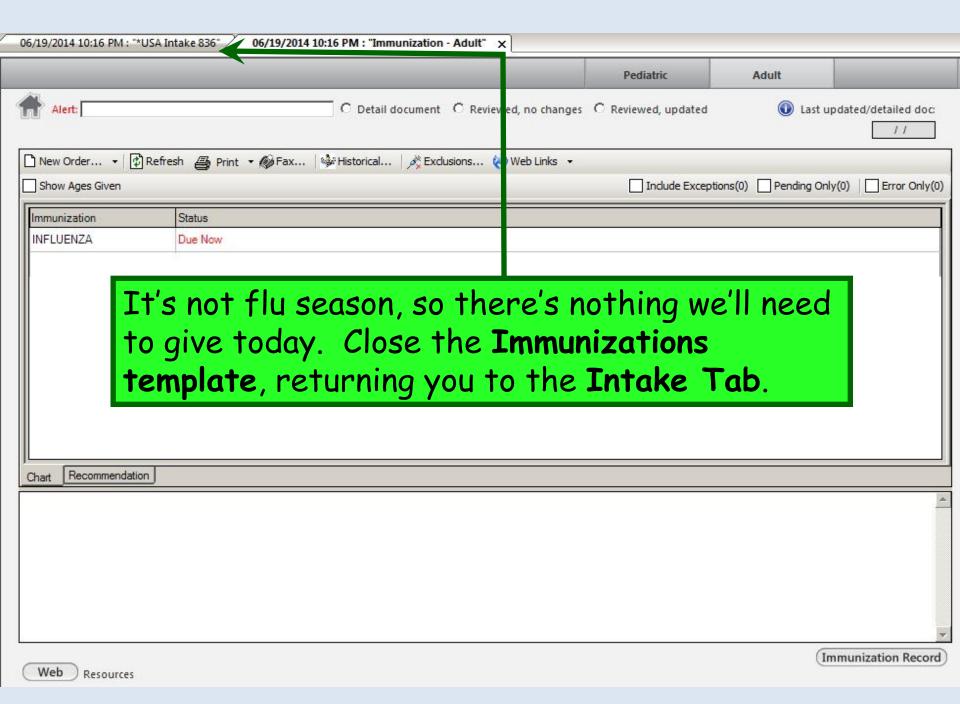

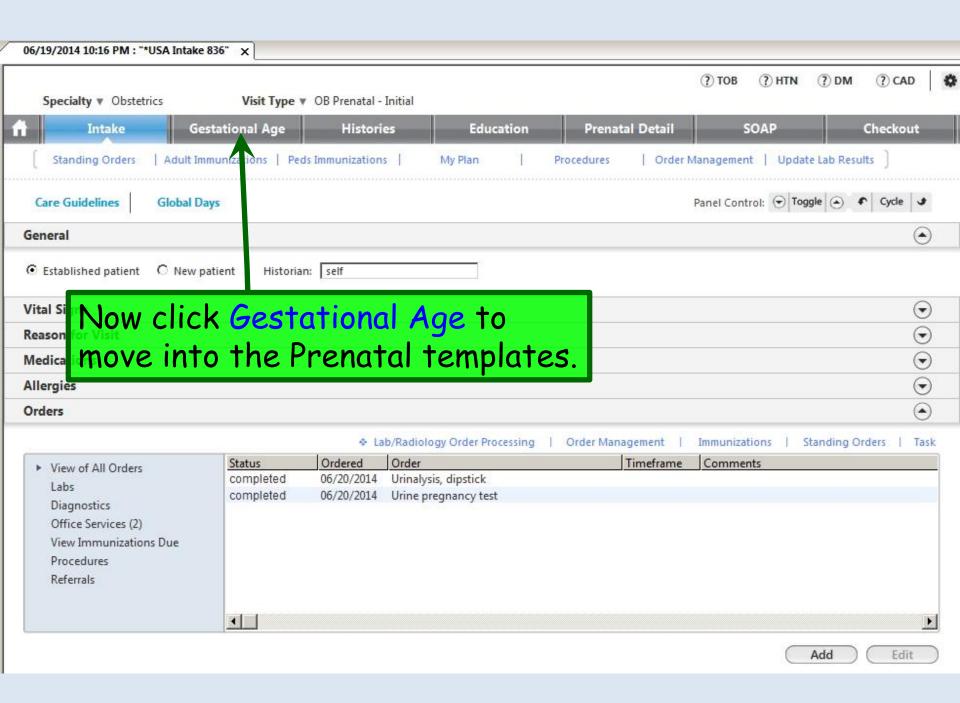

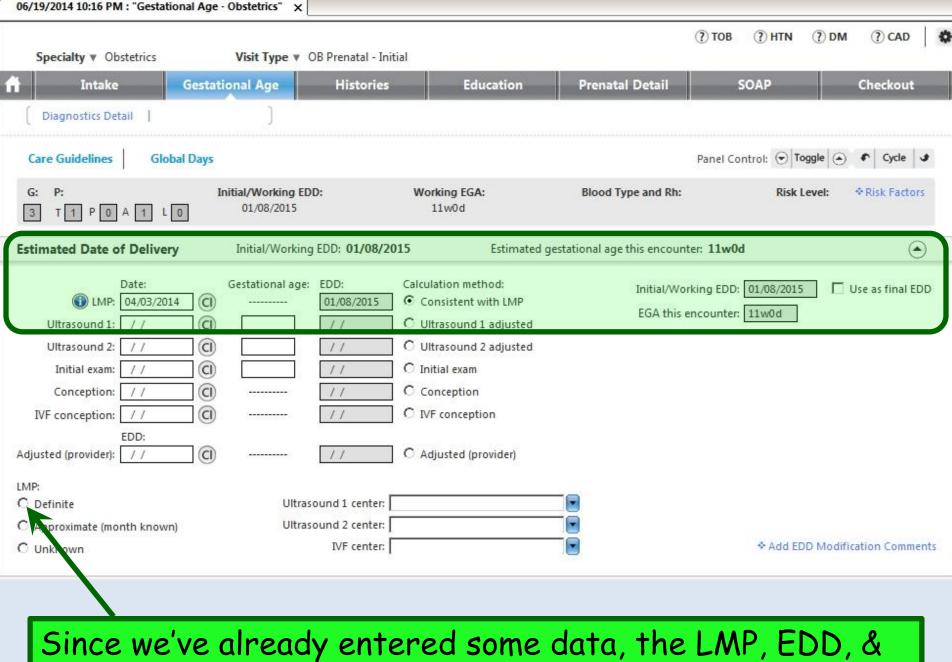

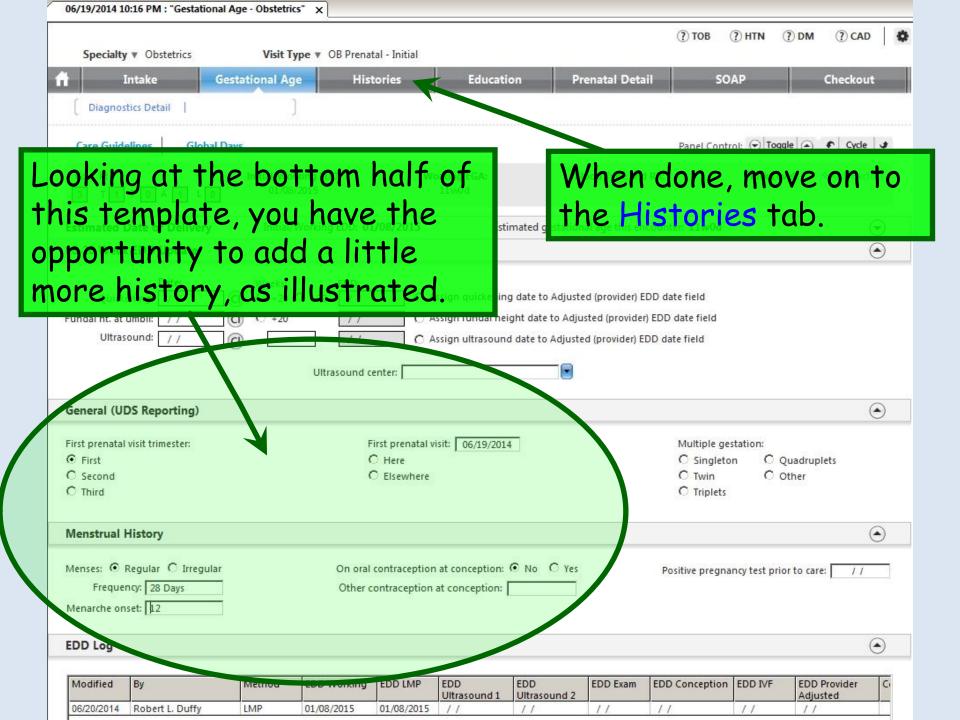

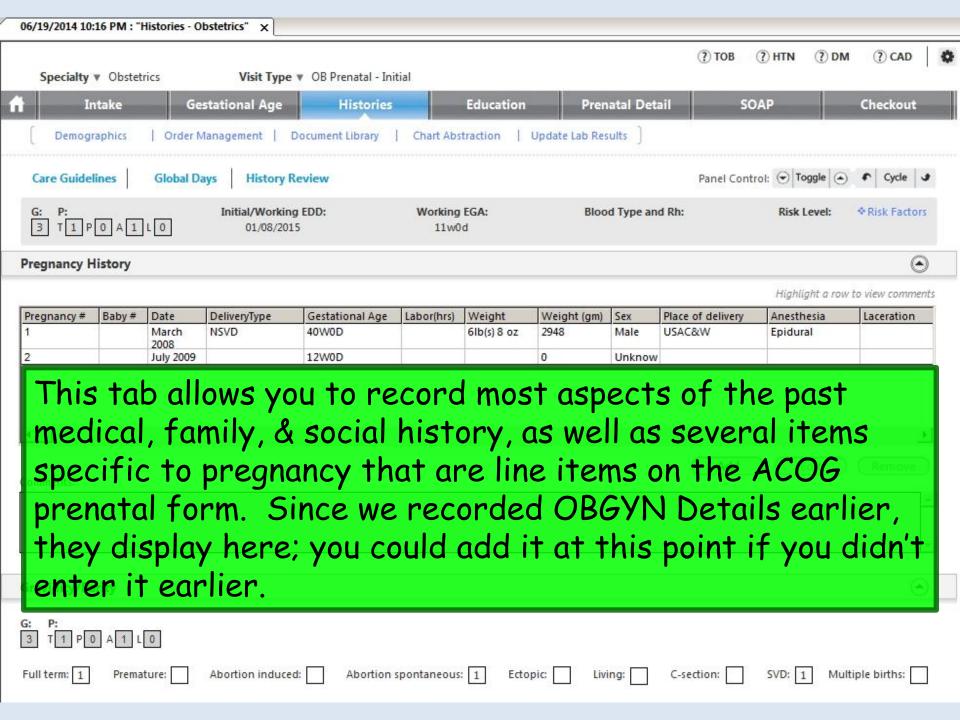

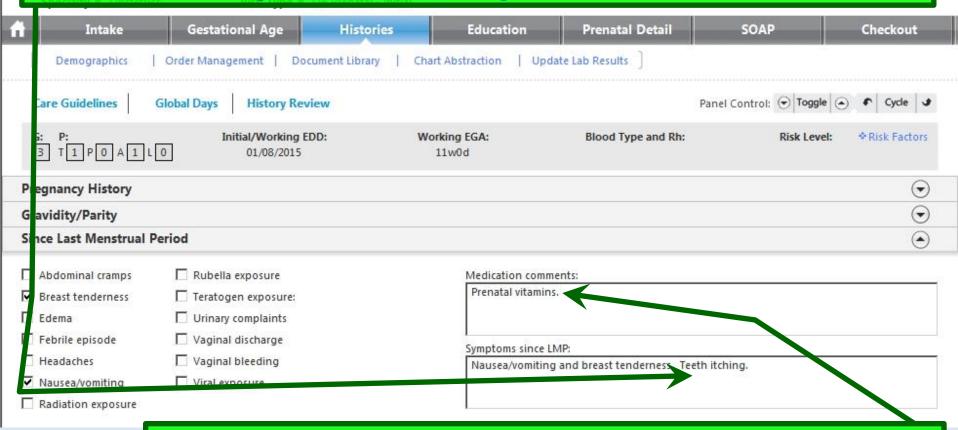

EGA display. She's sure about LMP, so we'll click Definite.

Navigating down the template, enter Symptoms Since LMP. You can just type in the box, or click the Add button & choose from the popup. We'll enter breast tenderness, nausea/vomiting, & teeth itching.

Also click in the **Medication comments** box & type entries as necessary. We'll enter Prenatal vitamins.

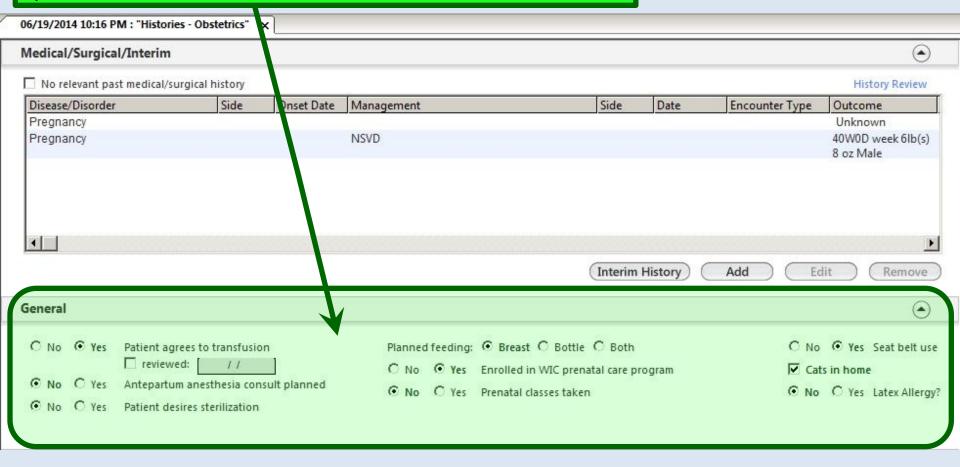

# In a similar fashion, document her **Infection History**. Her only positive response is for **Chlamydia**.

## There are several pregnancy-related questions to answer here, as illustrated.

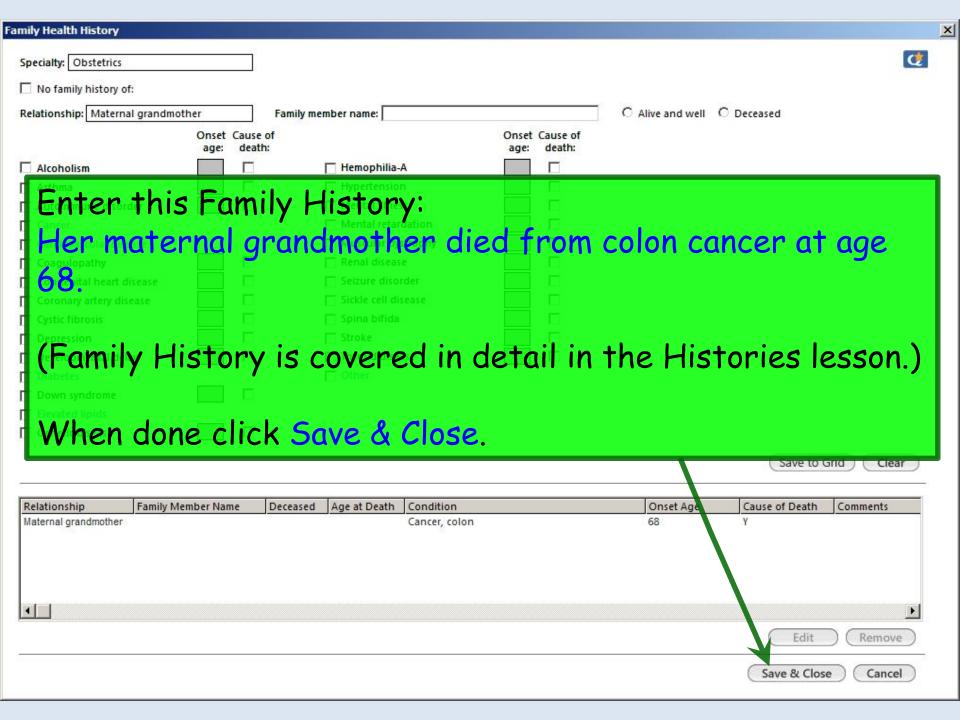

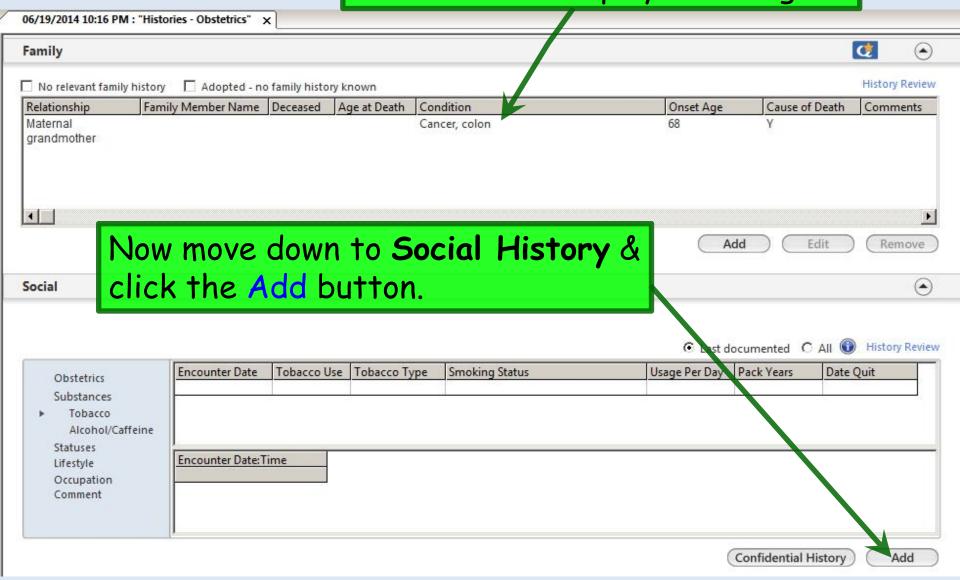

The Medical/Surgical/Interim grid is the same as on the Histories Tab you see on non-obstetrical encounters, so for an established patient, you'd probably already have all this info entered. For this example we'll add that she's had an appendectomy. Click Add.

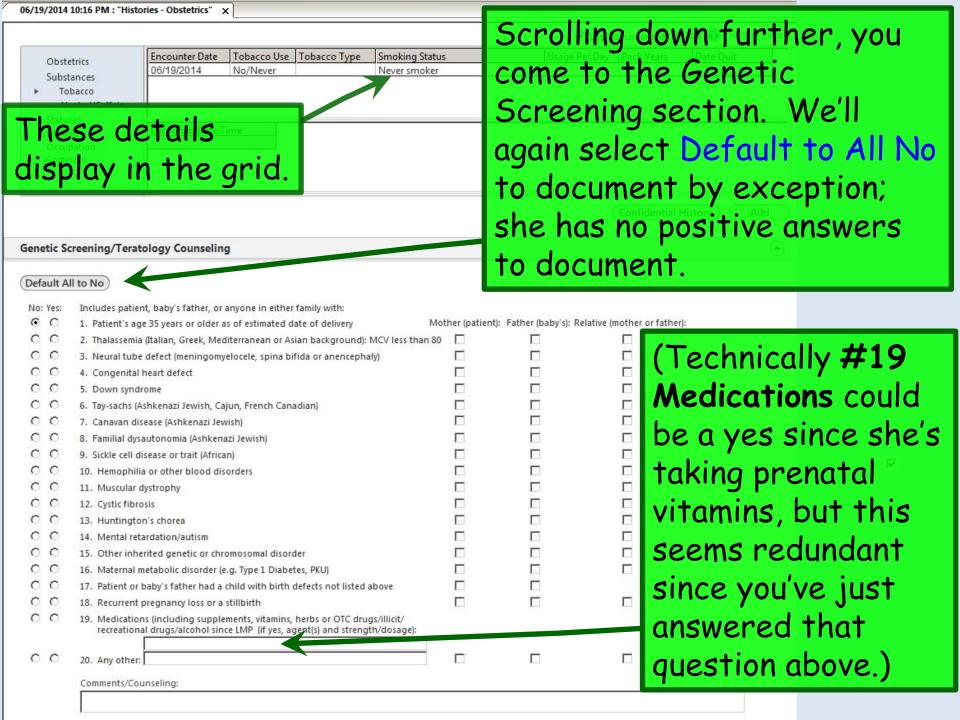

This addition displays in the grid.

The workflow you've seen thus far has the advantage of better combining the regular medical history with the obstetric-specific medical history than did prior versions of NextGen, but there is a potential gotcha: We haven't reviewed the **Problem List**, so you could overlook a chronic problem like asthma or hypertension.

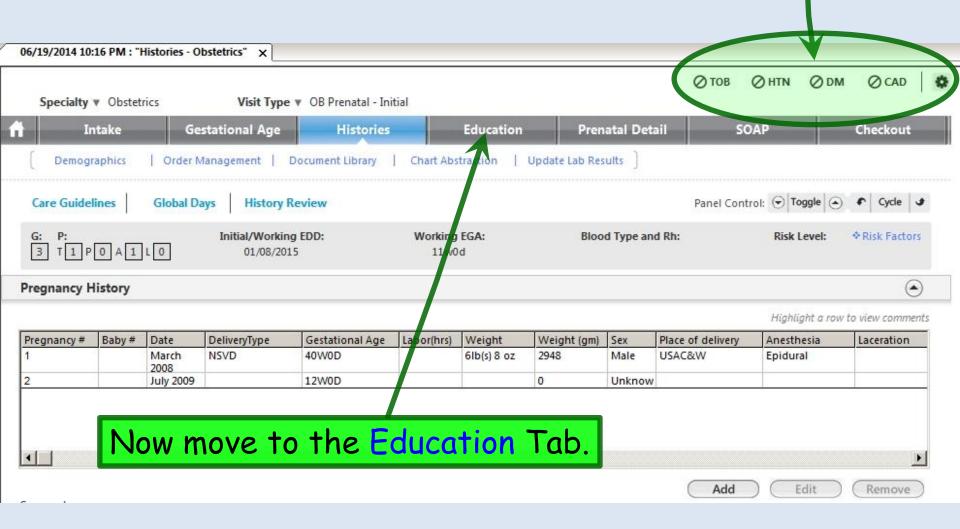

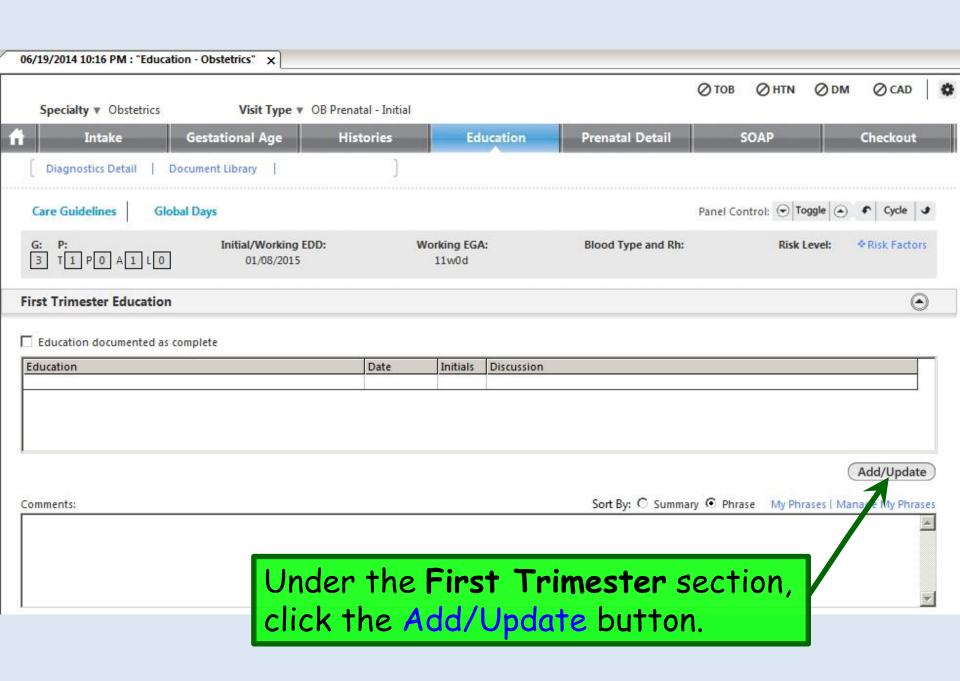

Tobacco has already been addressed.

Click the bullets for Hypertension No, Diabetes No, & Coronary Artery Disease No.

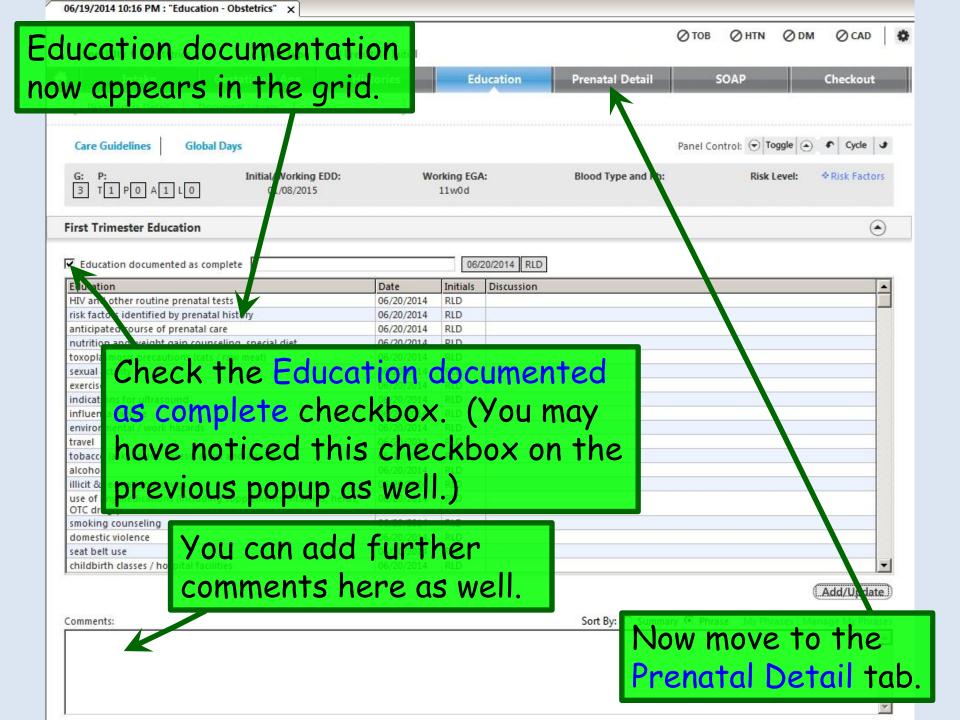

When done click Save & Close.

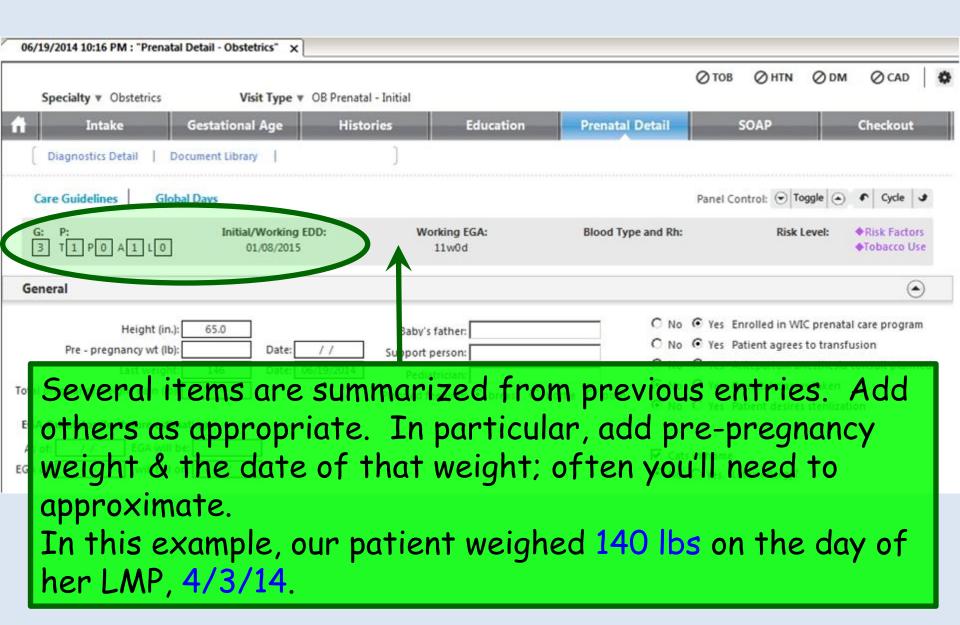

### All Risk Indicators are now configured.

After the intake OB information has been entered, the **Prenatal Visits** grid will be the main focus of OB visit documentation for the rest of the pregnancy. (For those familiar with the ACOG prenatal forms, this is the equivalent of the flow sheet pages on which you make all of the one-line entries at each visit.) Click Add.

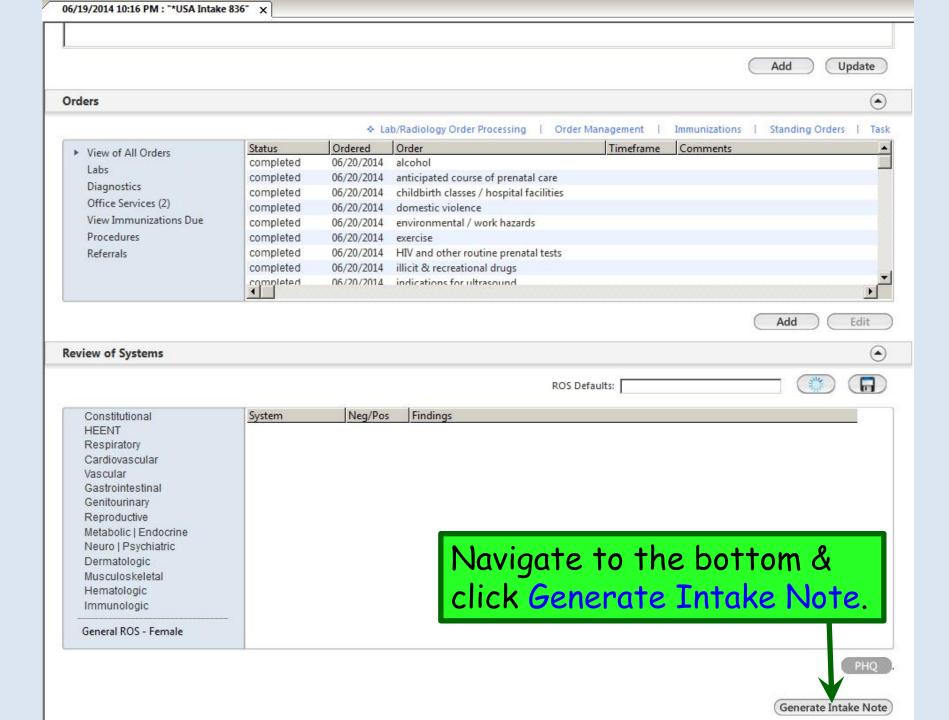

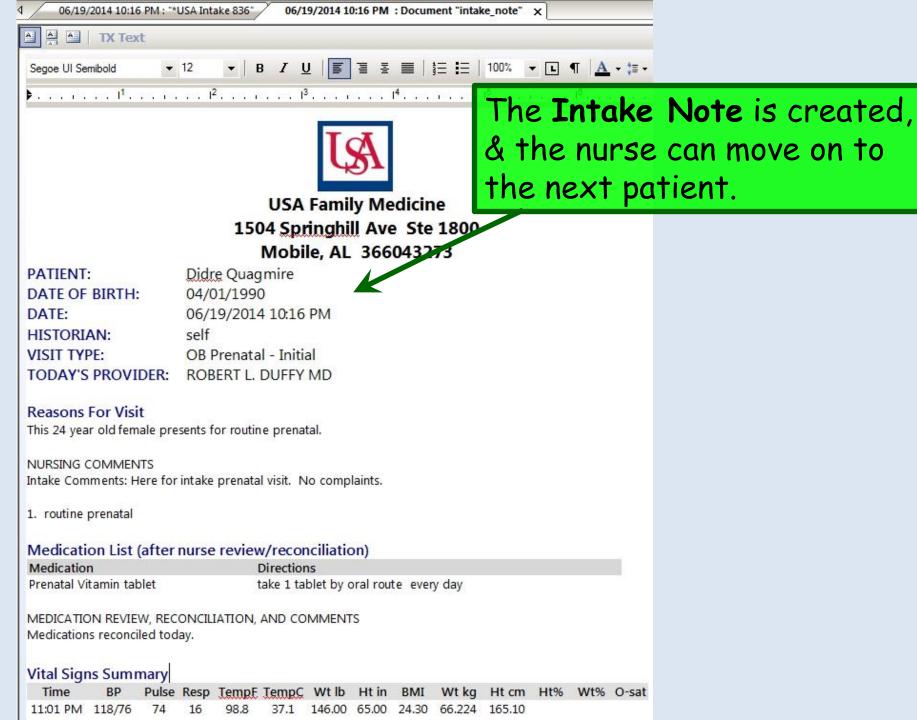

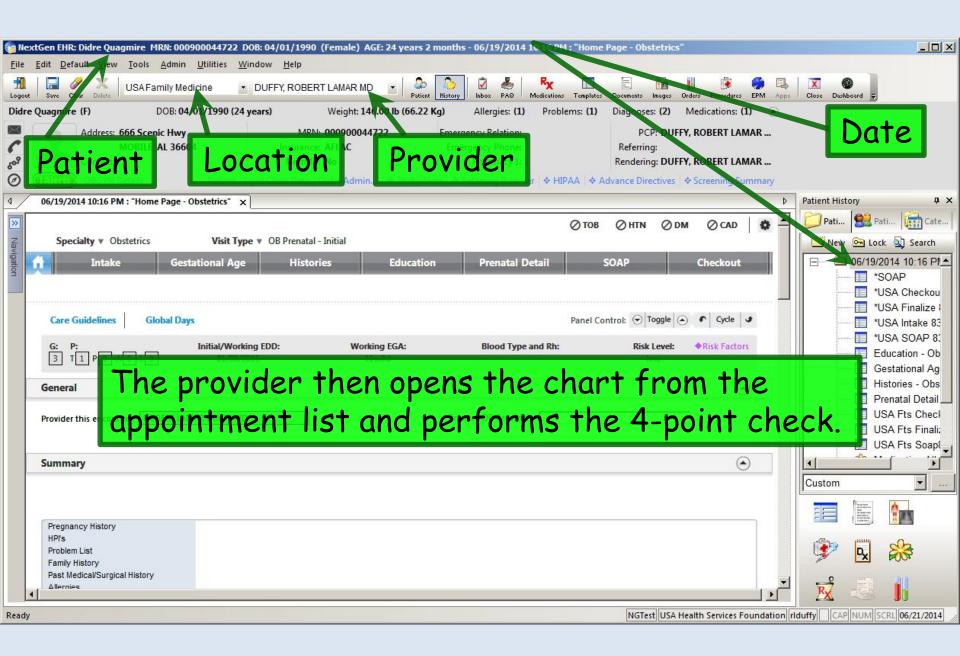

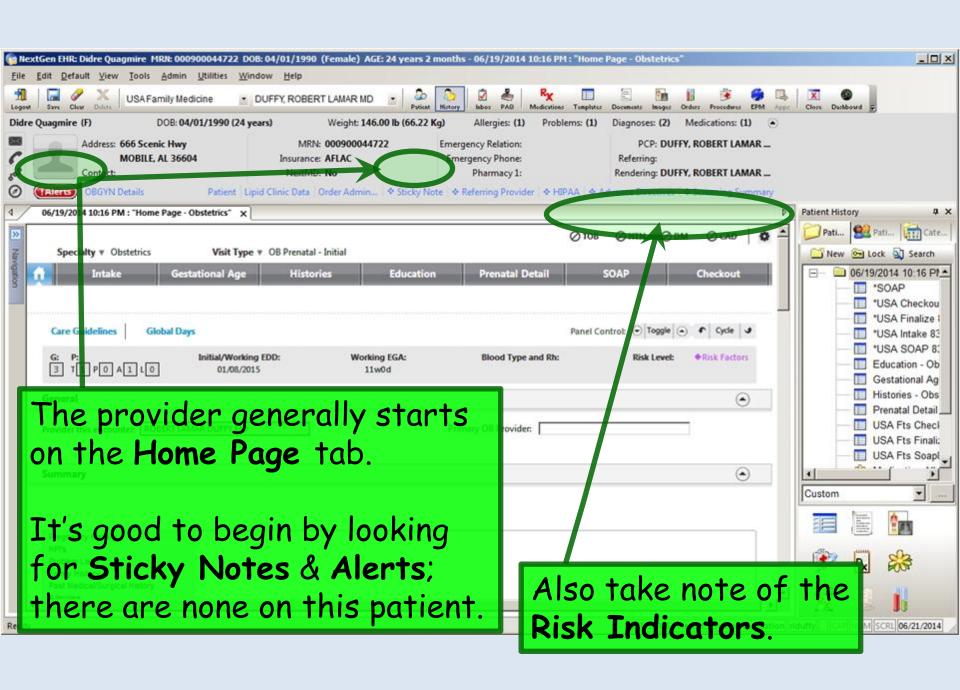

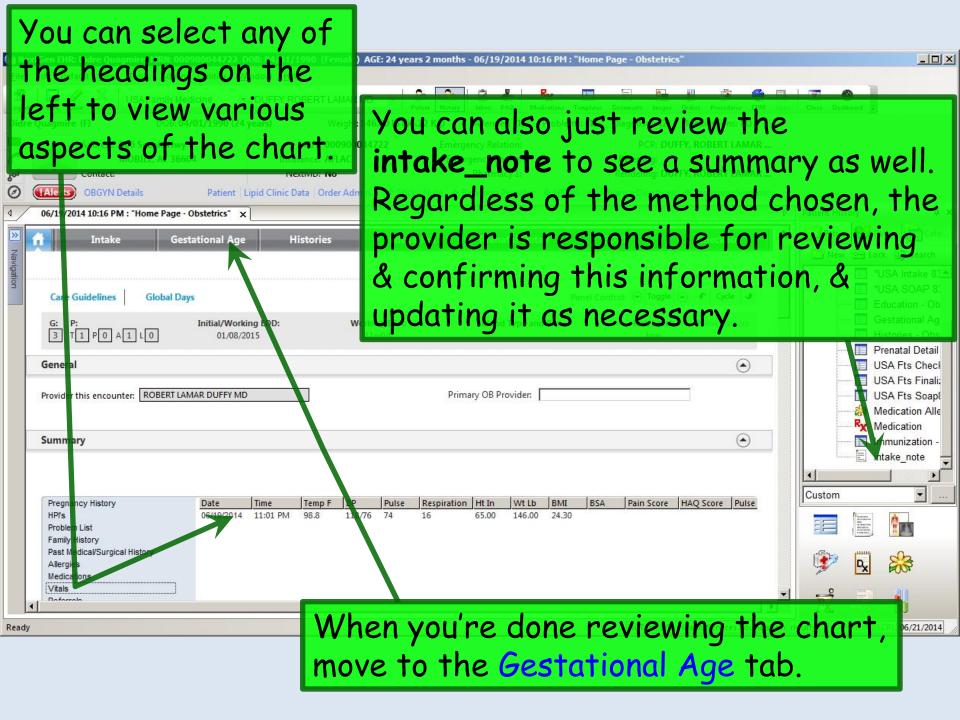

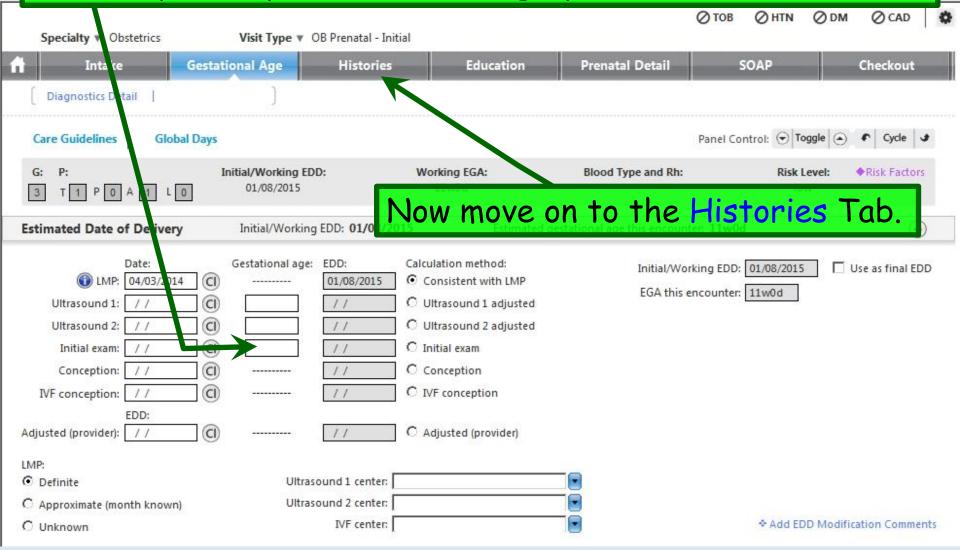

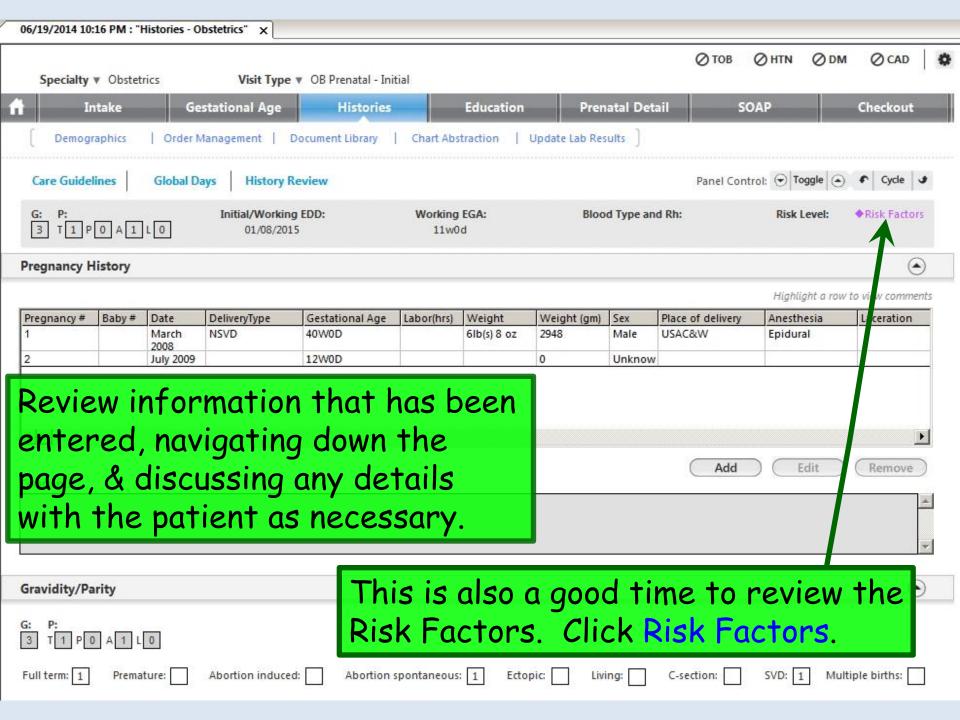

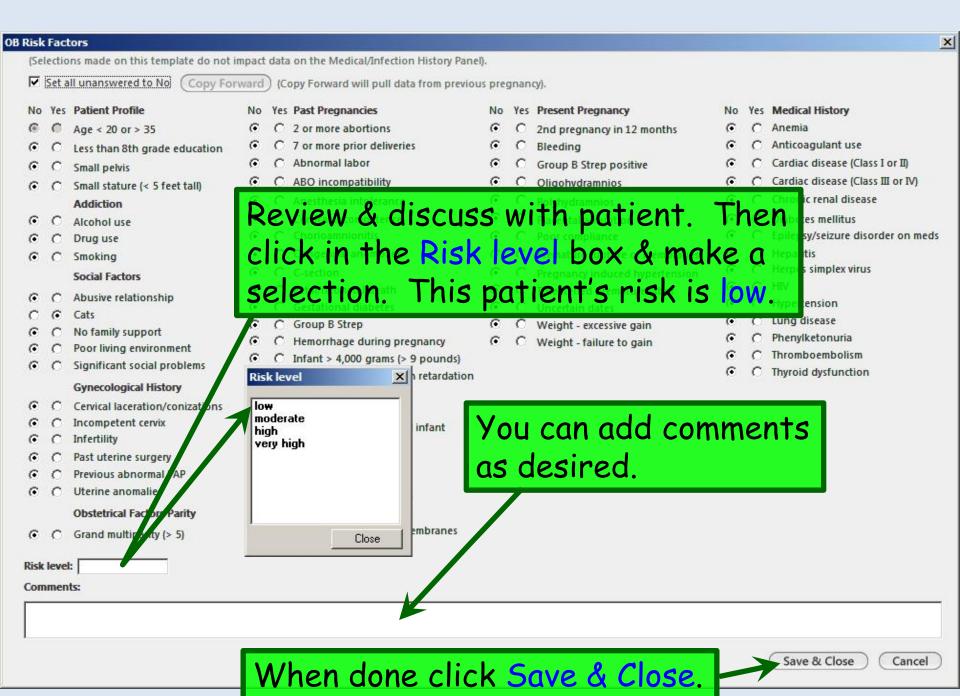

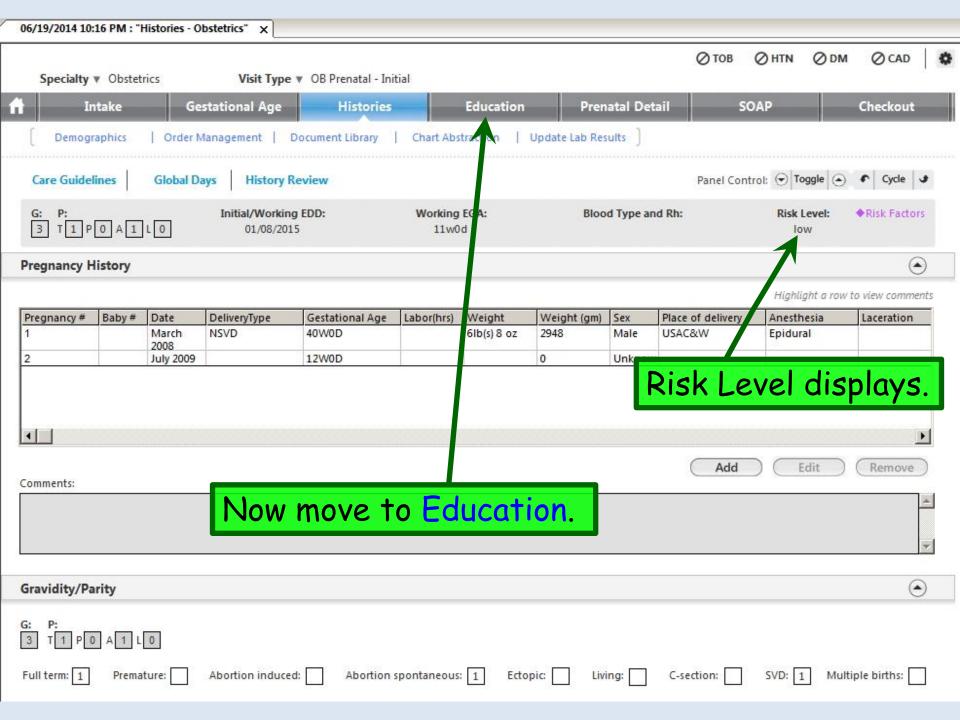

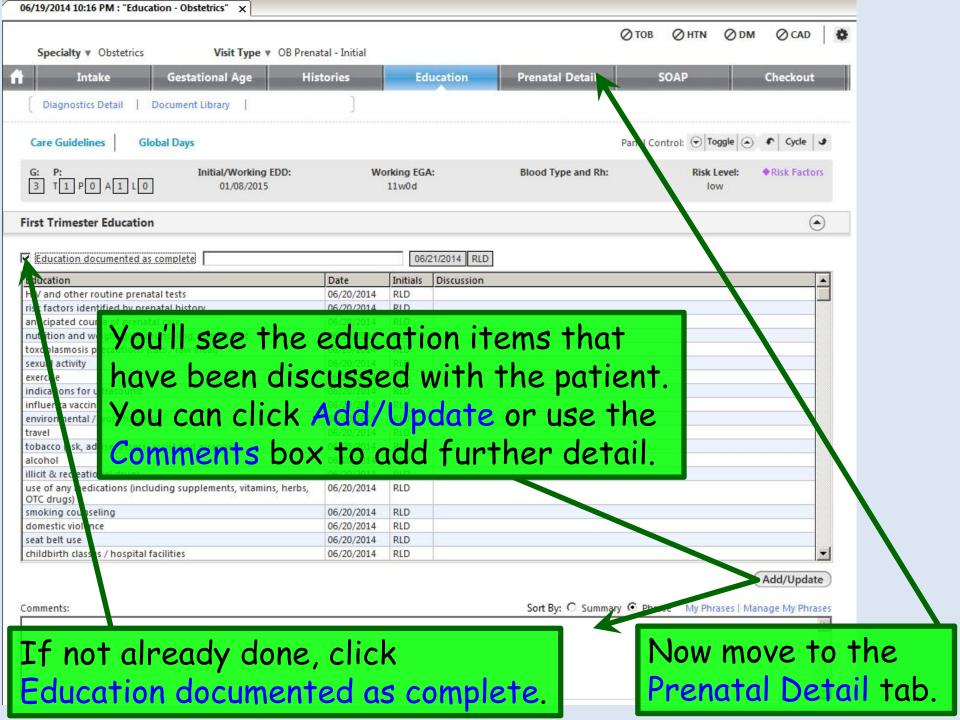

Review information that has been entered, clarifying any details with the patient as necessary. Navigate down to see the rest of the template. After your exam, you will confirm your impression of dating by exam.

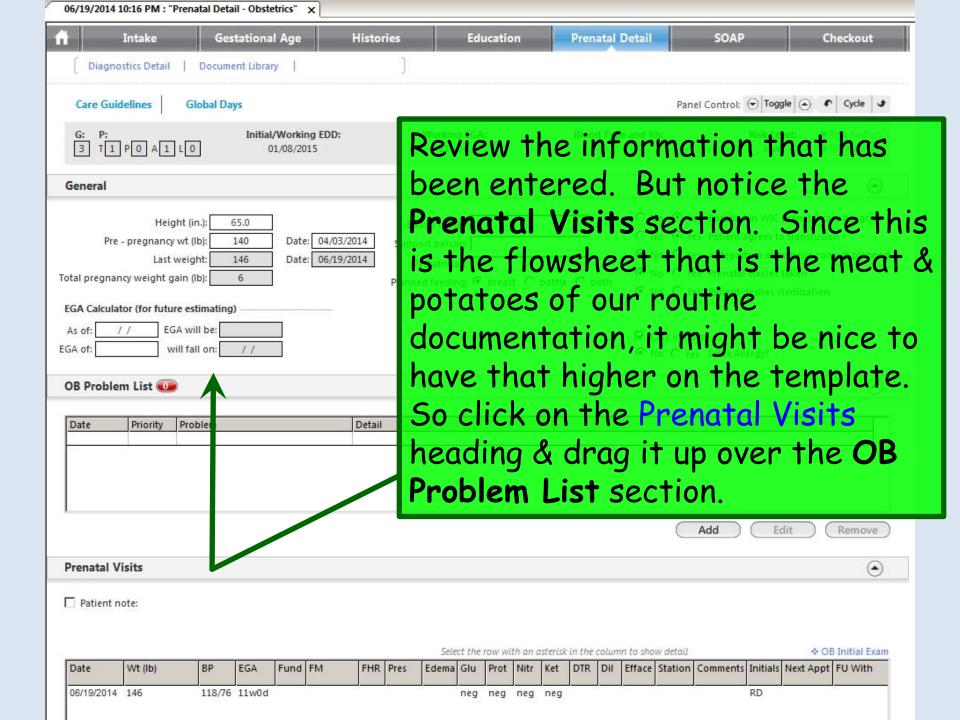

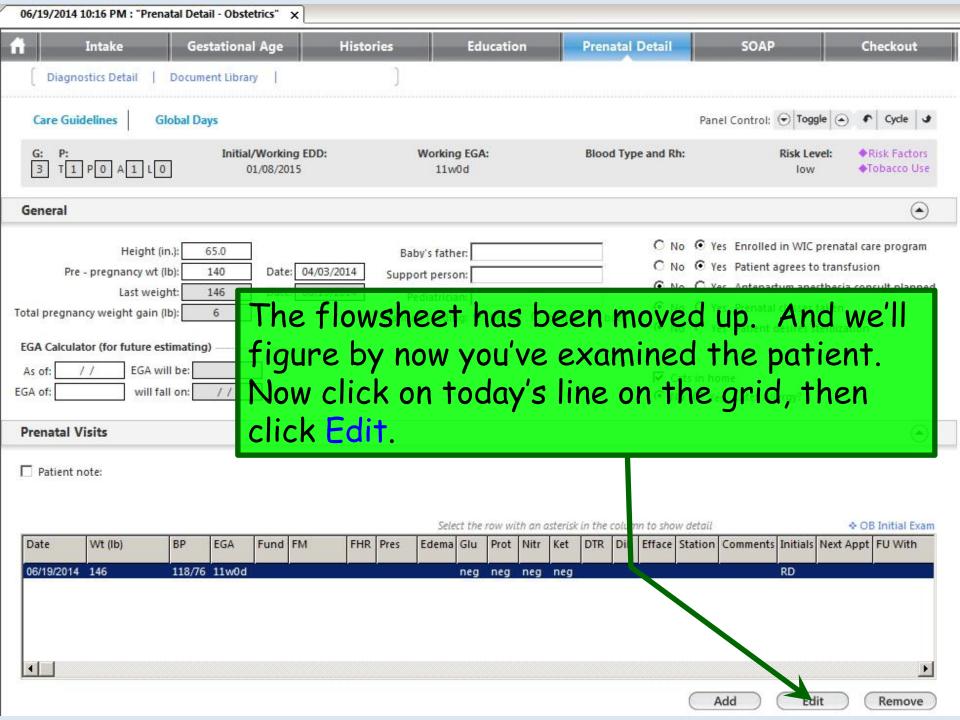

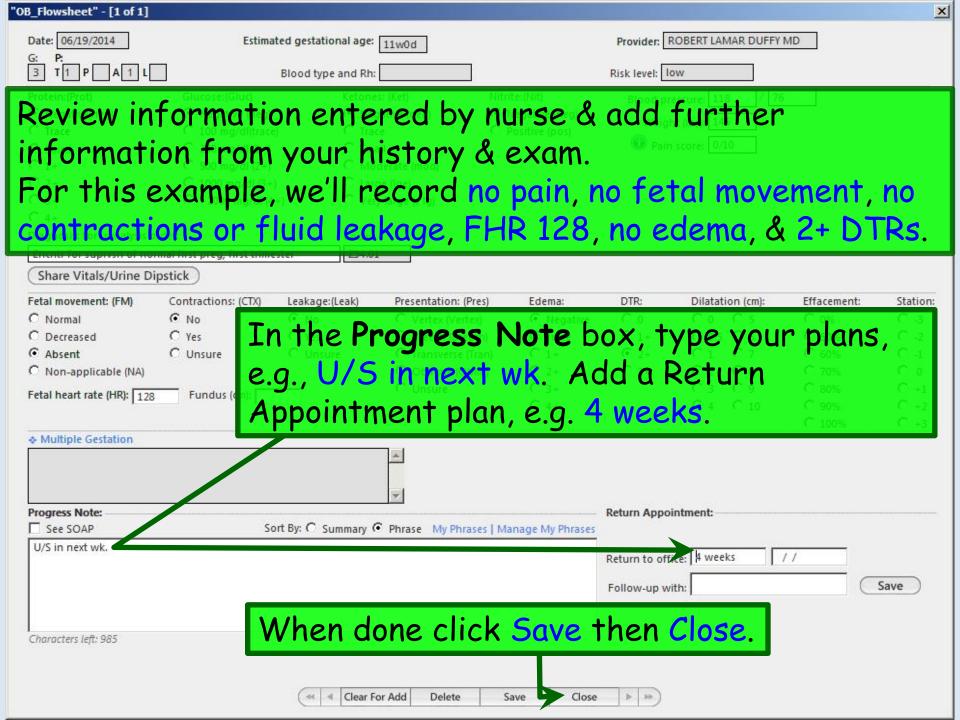

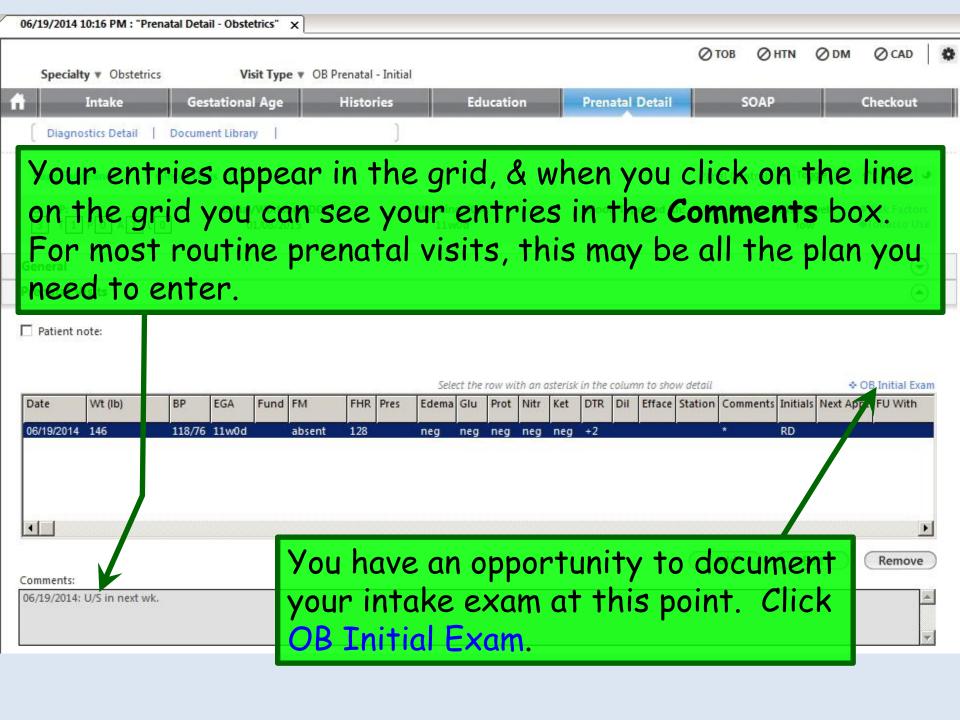

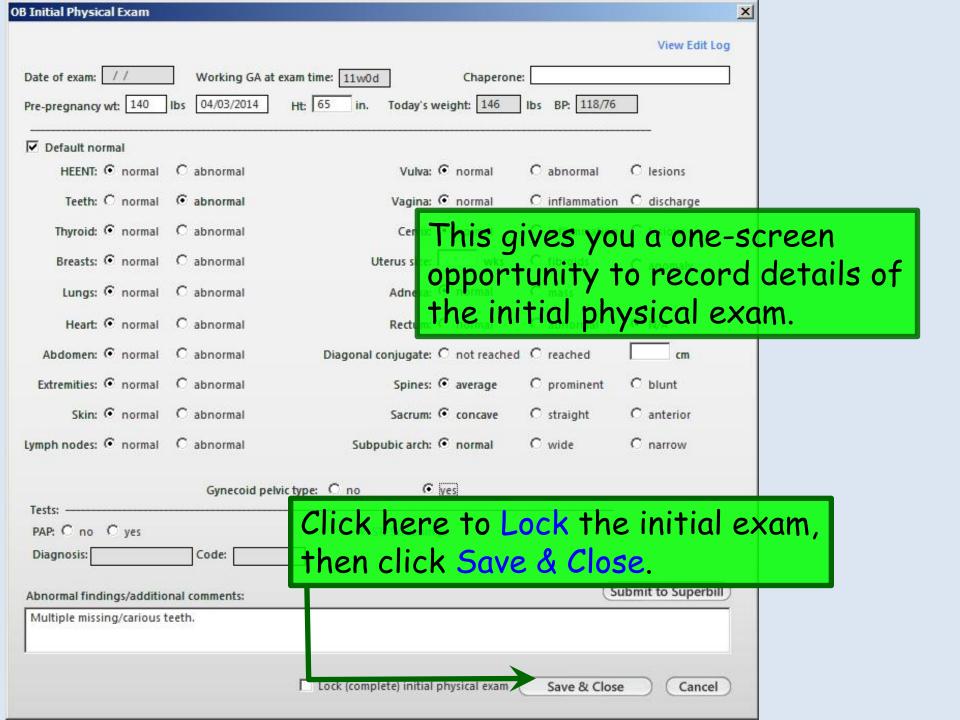

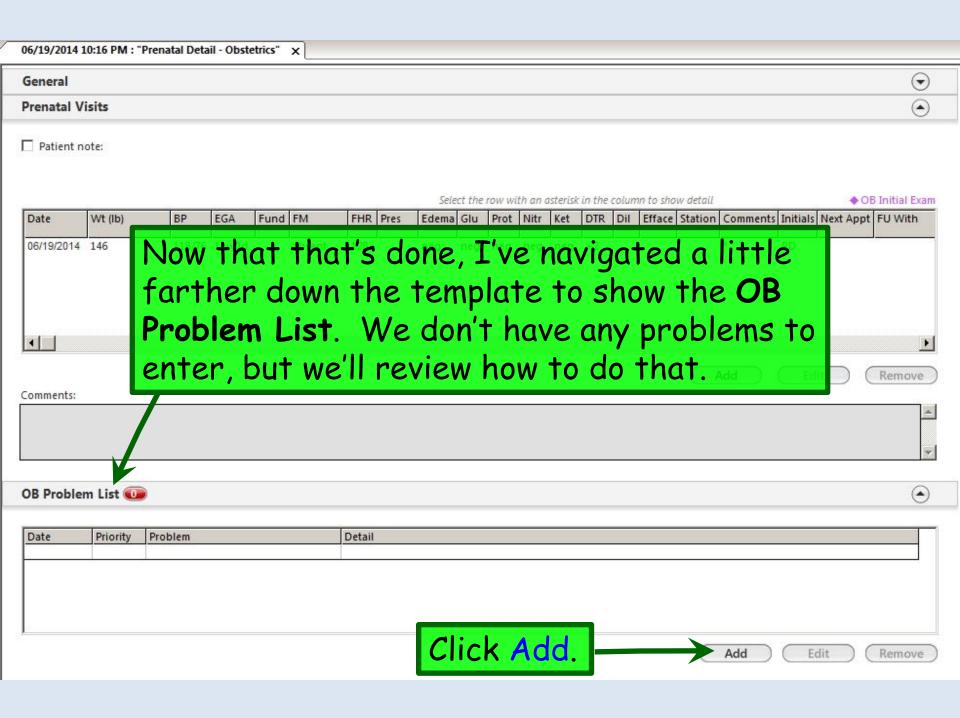

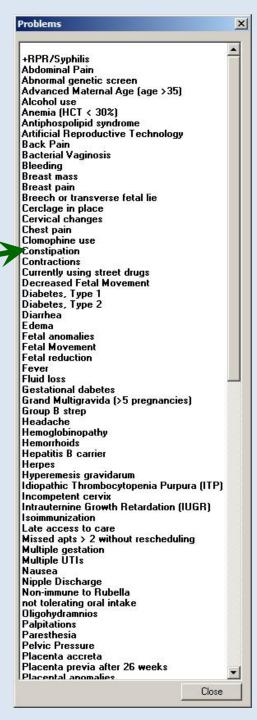

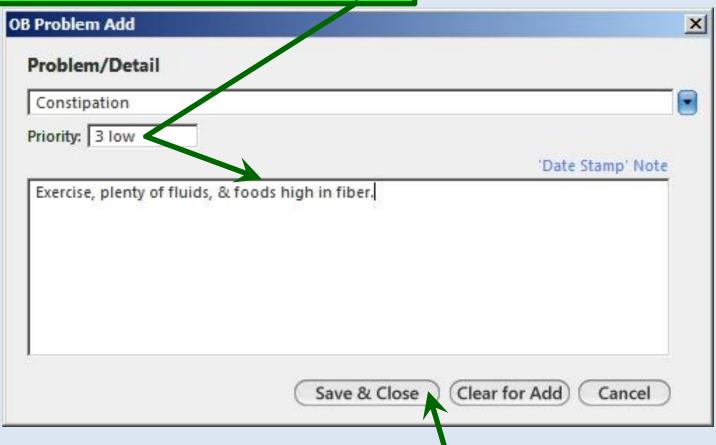

Click the Problem/Detail dropdown arrow to make a selection from the picklist, or just type in a problem. Here I'll pick Constipation.

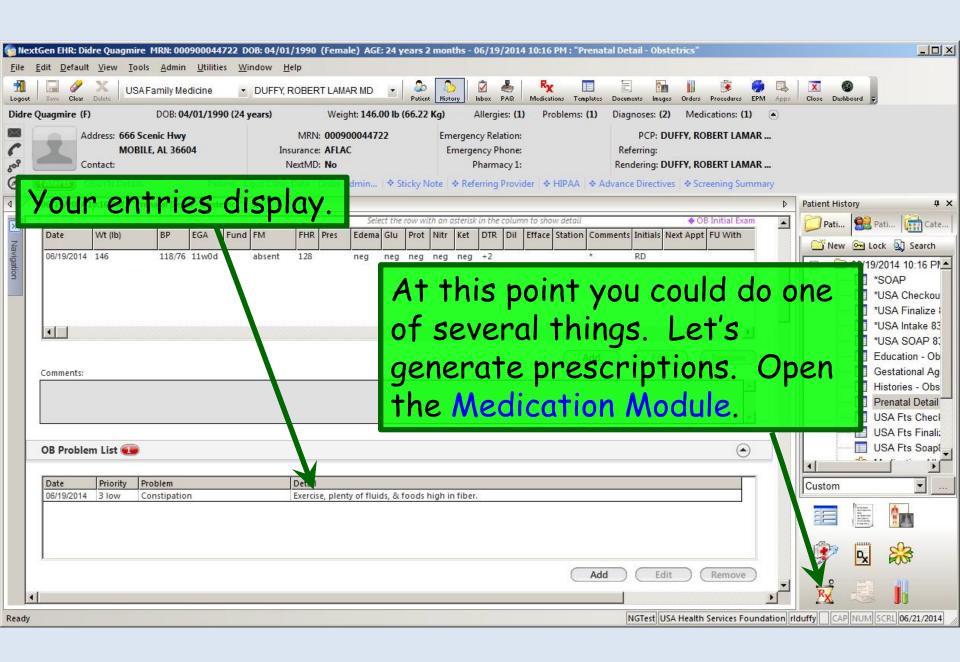

OB Problem Add	
Problem/Detail	
Priority:	
	'Date Stamp' Note
	Save & Close Clear for Add Cancel

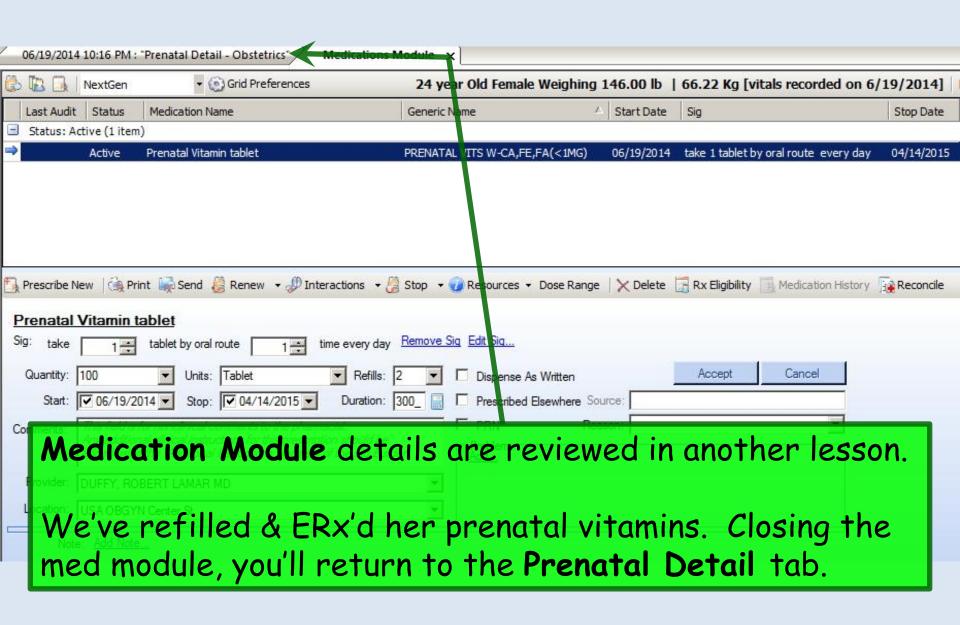

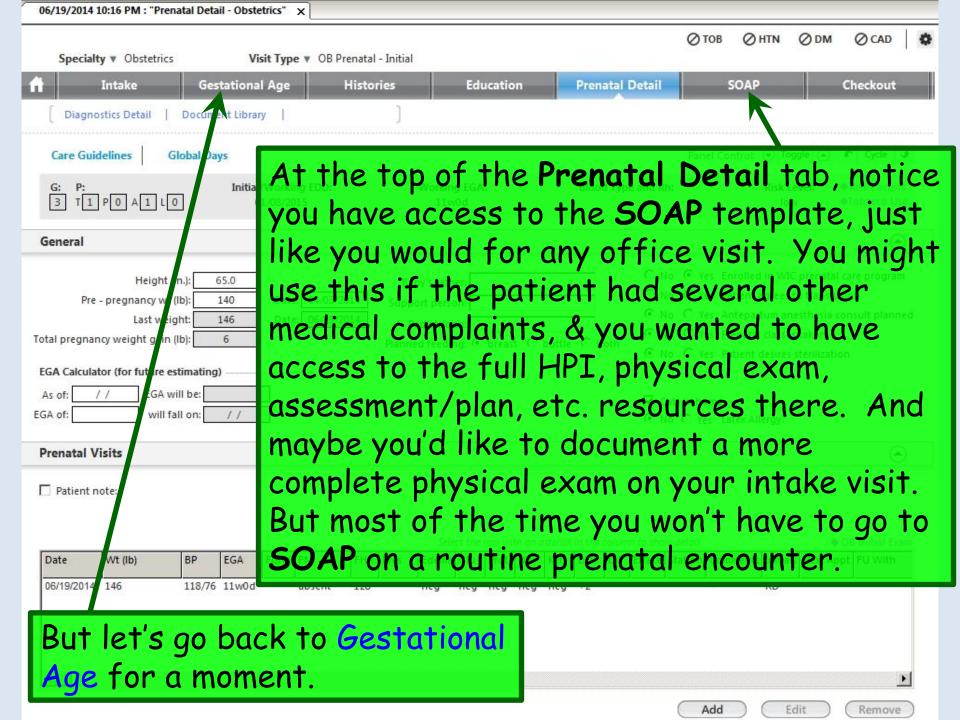

You can assign a priority & type plans/instructions.

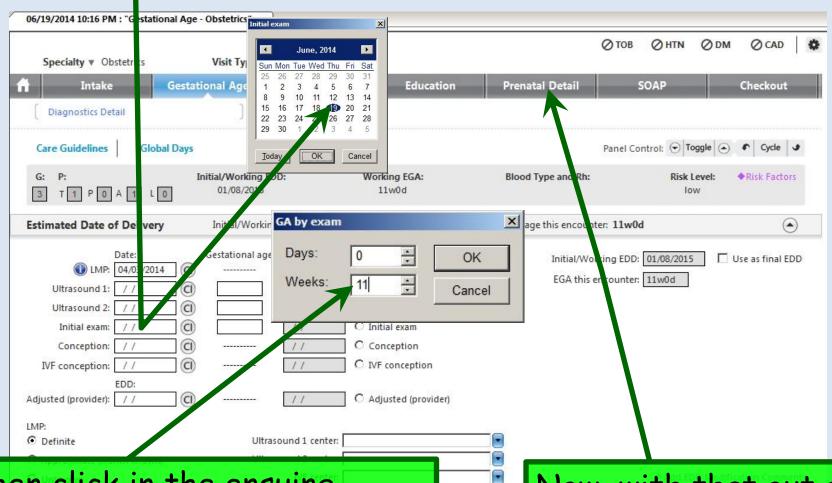

Click Clear for Add to make more entries, or Save & Close to finish.

## Click in the Initial Exam Date box & enter today's date.

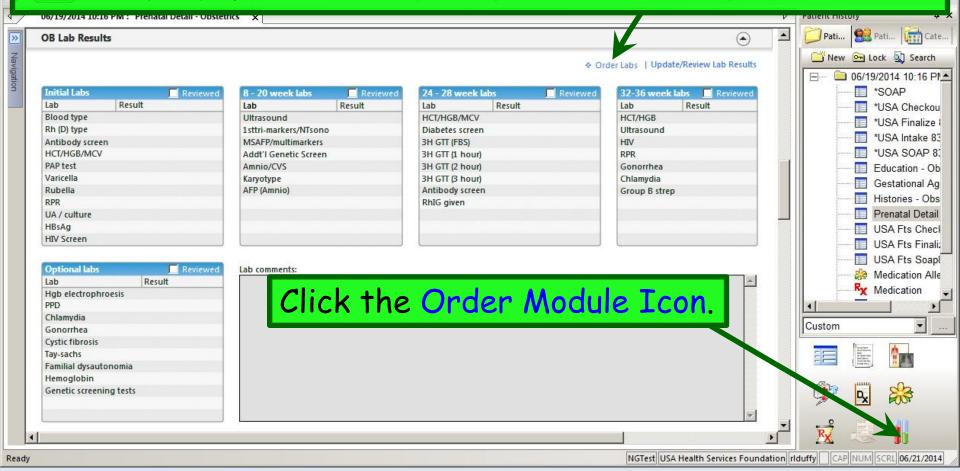

Then click in the ensuing popup enter 11 wks as your impression from today's exam.

Now, with that out of the way, let's go back to Prenatal Detail.

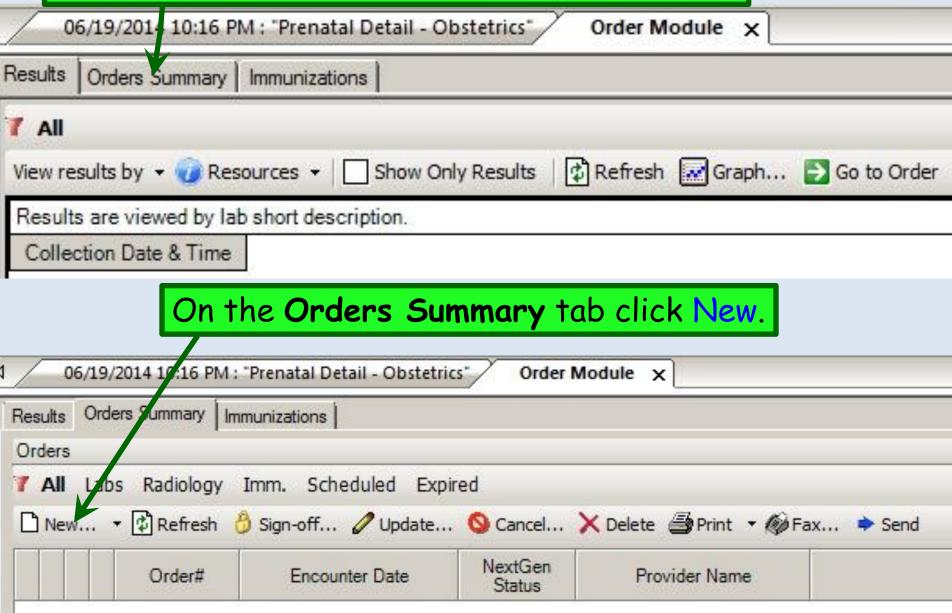

Here I've navigated down below the flow sheet & OB

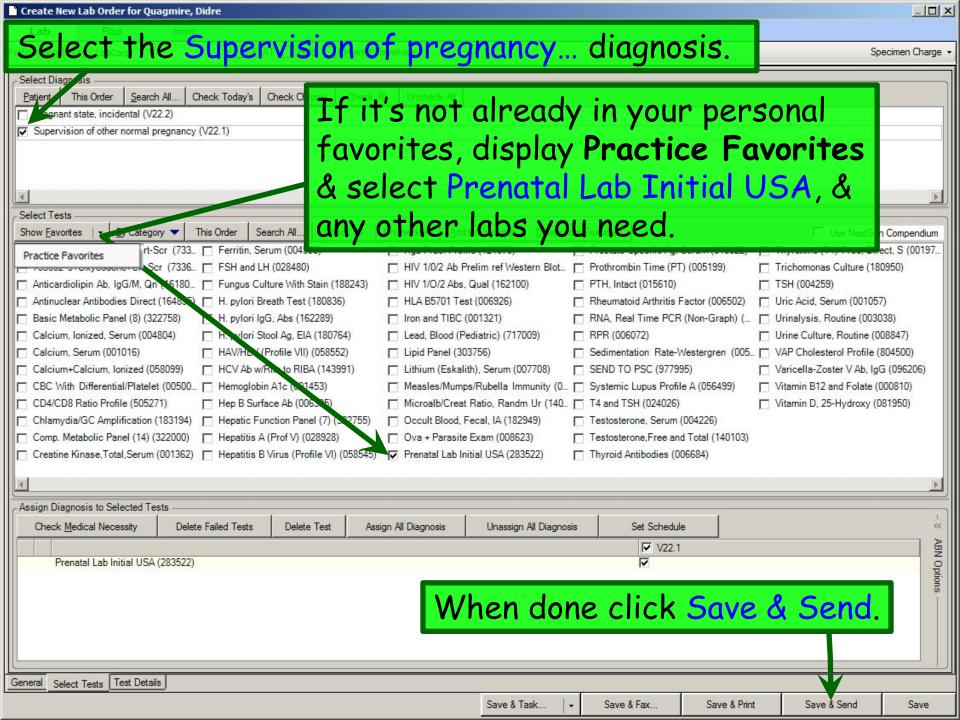

Problem List. You may notice a link that says Order Labs.

Technically, with some extra steps, that can work, but for us there are fewer steps if you place lab orders through the Order Module.

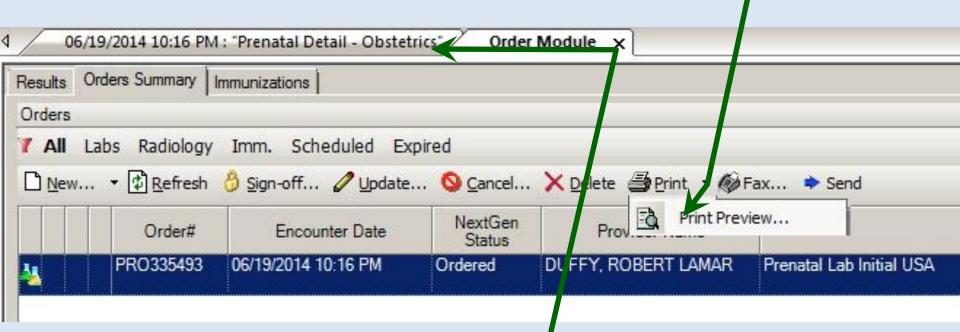

# The Order Module opens on the Results Tab. Click the Orders Summary tab.

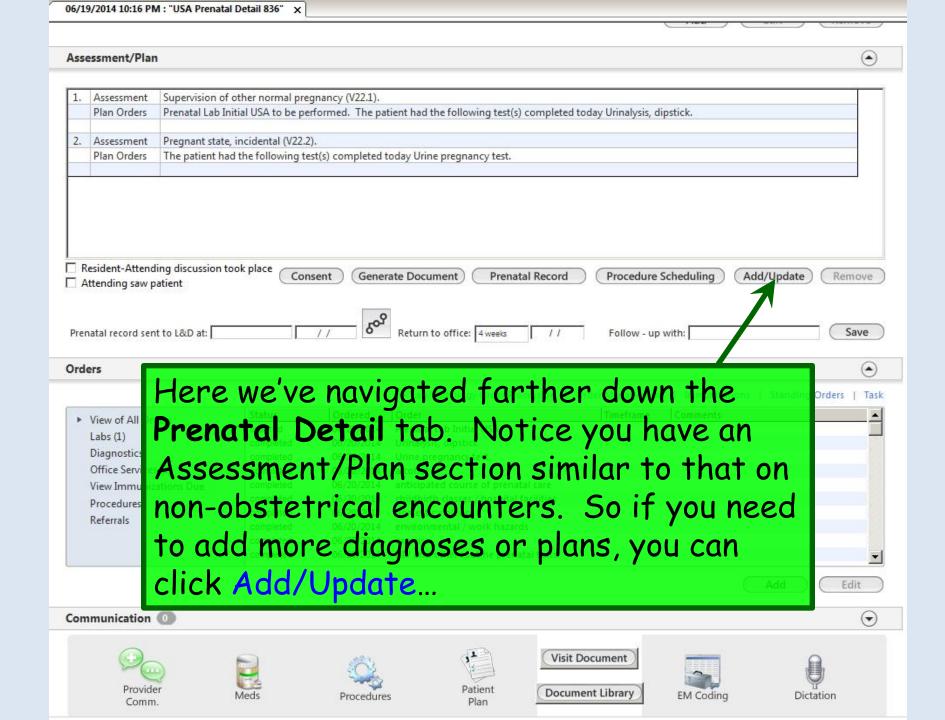

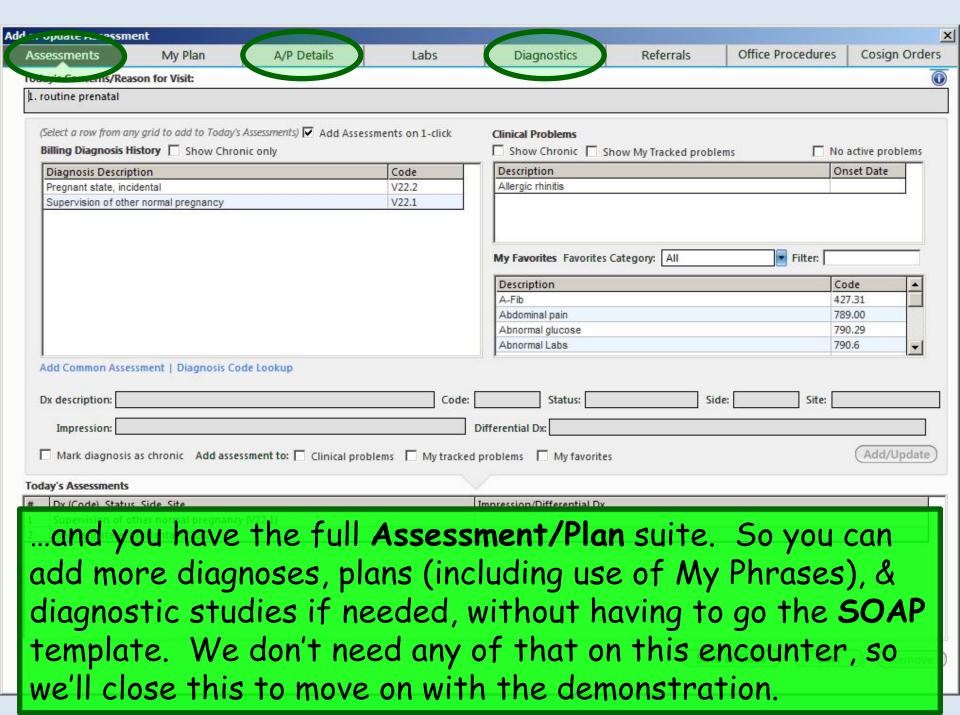

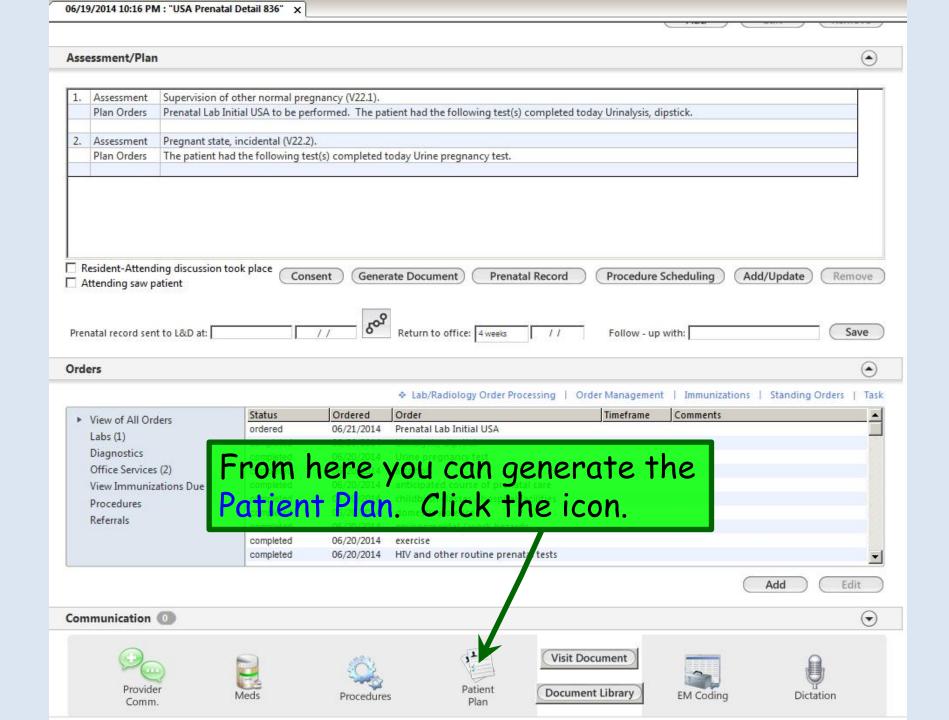

### Click the Print dropdown arrow & then Print Preview.

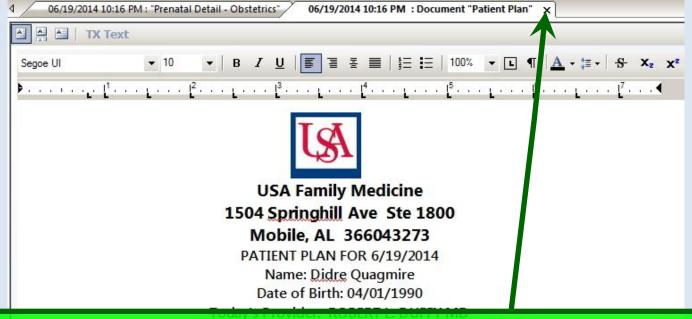

Select a local printer & print the order. Then close the **Order Module** & navigate back to the **Prenatal Detail Tab**.

Admittedly, the **Patient Plan** isn't a document that is all that germane or useful for a prenatal visit, compared to a regular office visit.

REASON(S) FOR VISIT routine prenatal.

## Print if desired, then close this to return to the

Encounteres Details taber normal pregnancy (V22.1).

2.	Assessment	Pregnant state, incidental (V22.2).
	Plan Orders	The patient had the following test(s) completed today Urine pregnancy test.
